## In the Land of Flowers.

## A Booklet by Walter N. Pike.

(With Portrait of the Author.)
During 1894 Mr. Pike contributed a series of twelve articles, under the above title, to The Mayflower, which elicited so many favorable comments, coupled with suggestions that the articles be issued in the form of a booklet for general circulation, that it was done. Mr. Hike revised the original chapters and added anomer, contaming many valuave sugytomons to those who contemplate making their future homes in Florida, or investing in the State in any way. The various chapters cover a wide range of higniy interesting and very fascinating subjects. There are descriptions of trips on the St. Jonn's, Ucklawana and Indian rivers, concainmg vivid pen porrayals of tue luxuriant vegetation lining their banks; descriptions of the rich tropical gardens of the Ponce de Leon and Tampa Bay Hotels, two of the largest and most famous hostelries in the world; an accuunt of the marvelous and worid-amed Silver spimg and the beautitul lnusan legend connected with it; a very interesting and instructive account of Orange and Lemon growing, with descriptions of several varieties of the Citrus family not familiar to the inhabitants of the North; and many more equally as interesting subjects are iully treated in an instructive and inceresting manner. Not the least interesting is a chapter describing the mammoth proportions attained in this climate by many of the common pot plants of the North.

The booklet will prove of exceptional value to the prospective tourist or home seeker, while to the great majority for whom there is no release from the rigors of a Norhern winter, it will turnish an enchanting picture of a land "where it is Summer in the Winter time." Many who have long been familiar with Mr. Pike's Floriculture writings have expressed a desire for his picture, and he consented to allow it to appear as a frontispiece in the booklet. It is a fine half-tone likeness from a photograph, taken especialy for the purpose. Price of the booklet, 10 cents per copy.
"Your booklet called.'In the Land of Flowers' is received and gives us much pleasure. I have read a dozen or more books about Florida. In comparison, I find one distinguishing excellence about yours, which makes it unique; that is - it is peculiarly Floridian in its literary genius. Its easy, graceful style and its buoyant spirit see $m$ the creation of sunshine and flowers. I have, for several years, known the parts of Florida you describe, and I find the information you give to be very comprehensive and accurate. Its masterful combination of the Esthetic and the Practical makes it a classical guide-b ook to the State. It is, for practical use, the best book about Florida that has yet appeared."-CHARLES F. RUSSELL, N. Y.

## FLORIDA SHELLS AND CURIOS.

We offer here a list of some of the most useful, interesting and curious Florida Souvenirs and Curios for the benefit of our patrons. The articies composing this list we have carefully selected, after personal inspection, as the most desirable among the long list of Souvenirs and Curios for which Florida is justly famous, and which are so eagerly purchased by the thousands if tourists who, every winter, flock to "The Land of Flowers." Many of the articles here offered are especially appropriate for birthday gifts, party favors, holiday presents, etc., and their value to the recipients will be vastly enhanced on account of their association with the land where it is always summer.

## ALLIGATOR TOOTH JEWELRY.

This very unique and popular iewelry is made from highly polished alligator teeth set in rolled gold, and produces a very pleasing effect.

Doubie Tooth Breast or Lace Pin.....................................
Gent's Scarf Pin, very pleasing....................................................

## FISH SCALE JEWELRY.

This must be seen to be appreciated, as no pen can convey any adequate idea of its fairy-like beauty; its frosty whiteness and silvery sheen rivaling the famous Mexican filigree silver work. Particu larly fine for evening wear.
Breast or Lace Pin..................25̃c. Orange Blossom Scarf Pin......20c. Pansy Scarf Pin......................20c.

## SHELL NAPKIN RING.

This is cut out of a curiously formed and beautifully-tinted sea-shell, making a most unique ring. The shell is of a beautiful pearl color, cluuded or marbled with deep green. Very nice for souvenirs, birthday favors, etc. Price, either plain or painted ("Souvenir of Florida"), 30c. each.

## JESSAMINE PERFUME.

The fragrance of the Jessamine is famous the world over. and as it is the flower for which our nurseries are named, it is but fitting that we offer its distilled sweetness to our patrons. It is prepared especially for us, and we consider it the most exquisite and lasting perfume made. 20c. per quarter oz.; 30c. per half oz.; 50c. per oz.; or $\$ 1.75$ per $4-\mathrm{oz}$. bottle.

## BEAUTIFUL SHELLS FROM THE GULF OF MEXICO.

There probably are no curios so popular with the majority as these "gems of the ncean's bed." Everybody admires sea shells, and no cabinet collection of curios or "specimens" is complete without at least a few. Shells from the Gulf of Mexico are justly noted for their great beauty and variety of forms, and we offer them in collections at prices so low every one can possess a nice assortment. We have collected them from the Egmont Key, an island on the Gulf Coast of South Florida, beneath the shadow of the great Egmont Lighthouse. It is not generally known that there lie buried on Egmont Key about one hundred Union soldiers of the civil war, yet this is a fact, and an almost impenetrable thicket has grown up over the spot. This historic fact adds to the interest and value of the shells as souvenirs. A very wide variation is embraced in the forms, sizes, coloring, etc., of these shells, including all those shown in the cut and many others. Some appear as if highly poliched or enameled, while others look as tho ugh chiseled out of purest marble. The collections we offer are assorted shapes, sizes, and colors, a nd specially selected for cabinets, brackets, mantels, etc. We send them postpaid at the foilowing very low prices: 6 for 20 c .; 15 for 40 c .; 25 for 60 c .; 50 for $\$ 1.00$.

## PEN HOLDER AND PAPER CUTTER.

This is a penholder and paper-cutter combined, nine inches in length. with six microscopic views of St. A ugustine in the handle. Very neat and pleasing, and a nice keepsake. 20c. each.

Note.-Everything will be sent postpaid at the prices quoted, but can not be sent in the same package with Seeds, Bulbs or Plants, as the postage rate is one cent per oz.; while on the latter the rate is one-half cent per oz. We guarantee the safe delivery of everything that is purchased from us.

B
ESIDES the premiums offered below we call special attention to the Check Premiums offered on pages 7 and 8 . Read carefully the descriptions and conditions stated at the foot of those pages, and on page 13 . The Check Premium offer of a $\$ 5$ Sago Palm on orders of $\$ 10$ or orer-going by express at purchaser"s expense - is to in duce club orders and large individual orders; but when this premium is selected we cannot allow any other premium or discount of any kind on the same order except on the amount over and above $\$ 10$. The Check Premium offered on a $\$ 2.00$ order-going by express at purchaser's expense-is for a free plant of any variety of Orange, Lemon, Lime or Grapefruit listed on pages 3 and 4. These Check Premiums, uith the exception of the Sago Palm Premium, are in addition to the following:

## PLEASE READ THE FOLLOWING SPECIAL INSTRUCTIONS.

Do Not order anything not offered in this Catalogue.
Be Sure and write your Name, Postoffice, County and State plainly, and state whether your order is to be forwarded by mail or express.

Always Keep a copy of the order, so you will know what you ordered. Patrons sometimes forget what they ordered, and complain unjustly.

We Cannot fill any plant order amounting to less than 25 cents, or seed order amounting to less than 10 cents. It takes as much time and material to fill a 10 -cent order as it does a 25 cent order.

Any One adding 10 cents to his order can have it packed in a liberal quantity of Spanish Moss, which is so beautiful for decorative purposes. Everybody is delighted with it. Besides, plants or bulbs packed in it are doubly safe, and evaporation is reduced to a minimum. (See description on page 5.)

By Mail we send everything postpaid, at the prices quoted, to any part of the United States and Canada and GUARANTEE their SAFE arrival. Once in a great while a letter fails to reach us, or the package we send gets lost in the mail. When this occurs, the sender, after waiting a reasonable length of time, should notify us of the fact, enclosing a duplicate order and stating how money was sent, and the matter will receive our immediate attention.

By Express-Goods ordered by express are sent at buy er's expense, but in many cases rather larger plants can be supplied in this way at mail prices, and are included to help defray the transportation charges.

By Ereight we do not prepay charges, and do not consider it advisable to forward perishable plants by that means to any distance. Freight service is to some extent uncertain, and there are often delays which would ruin a shipment of plants. We do not guarantee safe arrival of freight shipments.

We Guarantee the safe arrival of everything ordered sent by mail or express but immediate notice must be given us of arrival of anything in bad order.

Money May Be Sent at our risk only by Money Order, Registered Letter, Draft on New York, and Express Money Order. Do not send private checks in payment of bills. Banks now charge 10 c . to 25 c . for collecting same. As money orders are now sold at almost all Hostoffices, there are very few people not within reach of this convenient and secure method of sending money. Be sure and have all Money Orders drawn payable at Jessamine. Florida.

Special Notice-On arrival of a parcel of plants, unpack carefully, taking care to see that nothing is overlooked, and at once check with your copy of the order. If any of the plants appear wilted, set the parcel in luke warm water for a short time, which will revive the foliage. After potting, do not at once set the plants in the sun; keep in mind the fact they have been in the dark and must again become used to the light. Remember that most plants grown in the dry air of living rooms will be benefitted by frequent spraying of the foliage.

## HAVE MONEY ORDERS DRAWN PAYABLE AT JESSAMINE, FLA. <br> (INTERNATIONAL MONEY ORDERS AT JACKSONVILLE, FLA.)

## Oranges, Lemons, Limes and Grapefruit.

## Budded and Dwarfed on the Hardy Trifoliata Stock.

Dwarfed Orange, Lemon, Lime and Graperruic (fomeio) rices are among the easiest of all pot or tub plants to successfully manage, anu are unsurpassed among the many beantilul decorative pians ior entuer winduw or conservatory culture. Many persons have raised an Orange or Lemon plant from seed, wa tended it for years, withuut Deing rewarucu dy either blossoms or truit. 'Lhis is because it is has hature of a seeduing tree to devote many years to growth before it commences to fruit. Un the concrary, the large-fruited and large-gruwing Uraiges, Lemons, etc., when buaded or grafted on the dwarf and very hardy Japanese irmuliata Urange, are dwarica intu luveny liwe busnes, suitable for eltner pots, boxes or tuns, lust as quince stock awaris the pear, or the paradise stock dwaris the appe grated on it. But it dwarfs the tree only-they will be just as fruitful and Hormeruus, and bear just as large and fine ilavured truic as the big urtes here in florida. And they will also begin blooming at a very eariy age; in lact, inese awari trees begin to dioom wnen, no larger than a Geranium, and plants only lo inches high have produced at one ume 100 Dusi and Doosoms. But care must be taken or these little plants will kill themselves bearing. Ail the fruits except 2 or 3 should be picked off as soon as they set, until the trees are at least three years oad; after hat as they may be allowed to carry a greater numuer o. fruits each year, ut it is not wise to allow them to overload
 thrive and fruit indefinitely-nobody knows how lino, for there are pot-grown specimens in Europe which are 300 years old-and these miniature trees, whether white with their deliciously sweet blossoms or loaded with full-sized golden fruits, are exceedingly ornamental, and attract no end of attention and curiosity.

Full brivted cultural directions sent with every order for Oranges, Lemons, Limes or Grape Fruit for pot or tub culture.

THE PAINTER TENT CLOSED.

## Orange Culture in the Lower South.

## How They May be Successfurly Grown in the Open Ground in all the Guif States.

One of the practical results from the exceptional cold which visited Florida in the winter of 1894-5, and the more or less frosty ones which immediately followed it, was the discovery, through experimentation on the part of drierent individuals in widely separated sections of the State, that orange trees may be easily, cheaply and so effectually protected that they may be carried through any degree of cold that will ever visit the State, or any part of the lower South, without the loss of a single leaf or twig. These methods of protection consist of some kind of an enclosure around and over the tree, with an artificial heat inside. For individual trees the simplest and most easily constructed and managed device is the Painter tent, designed by Mr. E. O. Painter, of E. O. Painter \& Co., of Jacksonville, Fla., manufacturers of the Simon Pure Fertilizers. The accompanying illustrations show the tent open and closed, and it is so simple that anybody can construct it. Four pieces of joist are set at the desired height and breadth to cover the tree. By gathering the limbs of the tree together and tying up as close as possible, the size of the tent can be much reduced; but it is advisable to make the tent considerably larger than is needed at first, to allow for growth of tree. Floor over the top with boards, either tongued and grooved or batten the cracks, and allow to project 6 inches beyond the frame all around to protect the cloth underneath. Sew cloth together in strips long enough to go around the frame, and tack the top edge to the frame under the roof. Make a separate frame of $1 \times 2$ strips iust large enough to slip up and dofwn outside the 4 corner joists, and to this tack the bottom edge of the cloth. The tent is opened by shoving the bottom frame up to the top, the cloth folding in pleats like an accordion, and fastening with a wooden pin or nail.

## HOW TO WATER-PROOF AND MILDEW-PROOF CLOTH.

The cloth may be almost any grade of sheeting, but the better the grade the longer it will last and the more serviceable it will prove; and in order to get the greatest amount of servire out of it in every way it should be treated to render it waterproof and mildew-proof. E. O. Painter \& Co. furnishes such a cloth treated with parafine wax, and anyone contemplating using any considerable quantity of cloth would better communicate with that firm. Anvnne reauiring nn'y a small quantitv-sav for 1 to 3 or 4 tents-can water-proof the cloth themselves by the following process: Heat together equal parts of linseed oil and rosin; stretch the cloth upon frames and paint with the above mixture while it is hot; to render the cloth more translucent, and to prevent it from sticking together when packed away, it may be painted with lime whitewash before the rosin hardens, using as much as it will take up. So treated the durability of the cloth is increased and it is rendered more impervious to cold. To make cloth mil-dew-proof prepare the following solution: 1 lb . zinc sulphate, 1 lb . sal. soda, 2 ozs. tartaric acid. Dissolve separately and pour into 40 gallons of water, in which soak the cloth for 24 hours and dry without wringing. In case the cloth is to be subiected to both processes-and it is advisable to do so-apply the mildew-pronfing solution first, and then after the clath is perfectly dry waterproof it as above. Cloth treated to both processes and carefully stored when not in use, will lact a number of years.

At the approach of cold weather in the late fall bank up the base of the tree ac hich as noscihle with dry earth. This is an extra precaution in case plans miscarry in some way and the top gets frozen; all of that part of the tree under the bank will be saved and will quickly grow a new top. Set up the tent but keep it onen when it is not dangernusly cold. At the approach of a freeze drop the tent and place inside of it a lighted lamp or small nil stove. The lamp should have at least a 2 -inch wick, especially if it is very cold, and larger would be better. If the lamp is watched, carefully adjusted and not allowed to burn out, it will keep the temperature inside the tent above the freezing noint thenogh any cold that will vicit the lnwor Snuth. In case of extreme cold an extra lamp may be added for safety. In the spring store the tent under cover and it will last several years.

## OTHER FORMS OF PROTECTION.

Other devices may also be resorted to in place of the tent. A barrel or box will answer to place over the little tree the first winter, having a door in the side thrnuch which to place the lamn and tend it. and a hole bored at or near the ton and on the opposite side from which the wind is blowing, for the escade of surplus heat. And as the tree attains size a large box can be built
to enclose it, so constructed that one or two sides of it may be opened in favorable weather to admit light and air. By these simple methods of protection Oranges may be successfully grown in all of the Gulf States and up the Atiantic seaboard as far as Charleston, at least. If possible, choose for trees a sheltered location where buildings or a tight fence will shut off the north and northwest winds, and plant only trees budded on the hardy Trifoliata stock. This stock increases the hardiness of the varieties budded on it, changes them into low, spreading bush-form, starts them to bearing at a very early age and causes the fruit to ripen earlier in the fall. The Satsuma is especially to be recomm ended for planting in North Florida and other parts of the Lowei South, on account of its natural hardiness and early ripening. Budded on Trifoliata stock its hardiness is increased, and when dormant it will stand a temperature of 20 degrees above zero. The Kumquat, or Kin-Kan, is still hardier, and the Mandarin is also of a hardy nature, a naturally dwarf grower and an early ard profuse fruiter.

We make a specialty of Citrus fruits on Trifoliata stock and strongly recommend it for grove planting throughout the Or-ange-Belt of the State, and especially in those sections liable to visitations from frost. While it is a fact that the Trifoliata submits to pot or tub limitations better than any other known stock, and under these limitations becomes and remains dwarf, yet when planted in the open ground in Florida with unrestricted root room and long.growing season it is fully equal in vigor of growth to the common orange stocks; and whatever dwarfing is to be observed in open-ground trees will be found to be due to early and heavy fruiting which this stock induces. At the time of the double freeze $(94-95)$ there were growing in the State trees of Satsuma and other varieties of the Mandarin class on Trifoliata stock, varying in age from 5 to 9 years, which ranged in height and spread from 8 to 12 feet, and other varieties at 7 years were 15 feet high. As to its inducing early and profuse fruiting there is no question. We have had a Royal Pumelo tree (or bush, more strictly speaking) only $41 / 2$ feet high, pertect 44 fruits of very uniform size; several Buttercourt Urange trees from 15 to 24 inches high that bore 8 to 13 fruits, many of remarkable size considering the small tree; and a Homosassa Orange tree about 6 feet high loaded with fruit, one branch no larger than one's forefinger carrying $2 t$ oranges. These are only a few examples and show how quickly fruit may be obtained on this stock. It also induces earlier ripening of the frust and holds the trees dormant from a week to ten aays later in spring.

## KUMQUAT OR KIN-KAN ORANGE.

This unique and wonderfully beautiful Orange is a native of China and Japan. Nin-Nan, in Japanese, means Gold Orange, and its other name-Ktmquat-is Chinese for the same meaning. It is also sometimes called Chinese Gooseberry Orange-on account of the size of its fruits and the fact that it is not necessary to let it ever exceed the dimensions of a gooseberry bush. It bears in the most marvelous profusion little miniature oranges no larger than a damson plum, of a rich, golden color, and gattering amid the dark foliage like burnished cold. The whole truit, rind and all, is eaten, and one becomes extremely fond of them. The rind is sweet and the pulp agreeably acid, making a piquant combination. They are also used in cooling drinks, and are delicious preserved and crystalized. The plants commence to bear iust as soon as they have wood enough to hold fruit, and are loaded with fruit

and flowers every year. We have had little bushes only 20 inches high carrying upward of one hunared oranges. And the plants often set two or three crops in a year. But it is only when bud ded or gratted on the Trifoliata stock that it will bloom and fruir young or make a dwarf plant. Seedling olants will not bloom until they are several years old; and budded or grafted plants cannot be produced and sold at a lower price than we charge. The flowers are regular orange blossoms-waxy white and deliciously fragrant-the branches slender without thorns, the leave narrow and oval, and the plant assumes a fine shape naturally. As a pot plant it will create a sensation everywhere grown. In pot culture it need never become over 18 inches high, if so desired. Price, 25c. each; larger, 35c. each, postpaid; splendid fruiting plants, 3 to 4 feet high, extra bushy and heavy, by express, $\$ 1.00$ each; magnificent plants, 5 to 6 feet high, by express,
"I received the Kumquat Orange and it is a perfect beauty, a perfect wonder to all who see it with its ripe and green fruit, and buds ready for bloom-a perfect tree. 'What did you pay for it?' they ask me. I tell them $\$ 1.00$, at The Jessamine Gardens. 'Well,' they say, 'you could not buy it for $\$ 5.00$ in Topera.' This Orange tree is a great recommendation for your house and what you will do for those who send to you for anything."-SARA MAKIMSON, Kan.

## LIST OF LARGE-FRUITED VARIETIES.

Prices and Sizes of all except where noted, 25 c . each; larger and stronæer. 3 ñc. each, postpaid; trees 2 to 3 feet high, by express. 35 c. each; $\$ 3.00$ per dozen.
King-Belnngs to the Mandarin or "Kid-Glove" class. Fruit very large, flattened, with loosely adhering rind and segments; color, orange-red, the skin rough, but general aopearance fine; inner lining of rind and membranes bright buff, flesh deep or-ange-red, juicy and meaty and has very few seeds; quality very best, its high and peculiar aromatic flavor being very agreeable. Tree an upright, strong grower, quite thorny, and leaves large, dark and rich. Fruit at its prime from March to May, but keeps in good condition even later.
Mandarin-Willow-Leaved-The type or oldest known sort of the "Kid-Glove" section-so called because the skin and sections part so readily that the fruit may be peeled and eaten without removing one's gloves. Fruit small and flattened, yellow, spicy and very delicious; entirely distinct from all other sorts. Leaves small and willow-like and the growth slender and elegant. Naturally a dwarf grower and is especially fine for pots and tubs.

Puldy-The favorite Blood Orange. Fruit medium sized, nearly round, skin thin but very tough, pulp melting, rich, juicy and of exquisite flavor. As the fruit ripens it usually becomes streaked or mottled with blood-red, and often the entire pulp gets ruby-red, showing through the peel in a reddish blush on the outside. Tree a vigorous grower, nearly thornless, a regular and heavy bearer, and is recommended without qualification for either pot or tub culture and general planting in groves.

Satsuma (Also known as Kii Seedless, Oonshiu and Unshiu.) -This is the tavorite variety in Japan, and is one of the hardiest of all orangesbudded on Trifoliata stock, 20 degrees above zero does not injure it when dormant. Belongs to the NVandarnn or "Kid Glove" class, but is entirely distinct. Fruit matures from September to November, but with pot or tub-grown plants it will hang on till March. Of good size and very highly colored, of a deeper shade of yellow than the Mandarin, appearing as it varnished; the shape odd, being flattened as if it had been pressed, and the flavor very aromatic and fine. Tree thornlesis, very low-growing, with peculiarly large leaves, commences to bear while very young, and is very productive. Is especially desirable for pot or tub culture; is one of the most valuable for grove planting, and it should be grown in the open ground in all of the Gulf States.

Taxdiff (Hart's Late)-The standard late orange, the fruit keeping on the tree until July or even later. Of medium size, very solid and heavy, flavor brisk and racy, and few seeds. Tree very vigorous, spreading, prolific and has few thorns. One of the most valuable of all for grove planting.
Wi-sa Eranca Lemon-This is considered one of the very best sorts and has taken first rank in many competitive exhibits. Dwarfed Lemons make the finest of house plants, beginning to bear almost at once and producing fruit and flowers in great profusion. They are also practically everbearing, fruit in all stages of development and buds and blossoms usually showing together at any time of the year. Flowers pure white, tinged with pink on the outside, and very sweet. Fruit grows larger and is much more juicy than that offered in the markets, and stronger flavored. Everybody should have a Lemon bush. 25 c . each; larger and stronger, 35c. each, postpaid; fine, heavy, bushy. 2 -year-old fruiting plants by express, 50c. each.

See Lemon Testimonial on page 2.
Lime-All said in favor of the Lemon as a house plant may be said of the Lime. The plant has smaller and more delicate foliage than the Lemon, is a more compact grower and itio flowers and fruits are smaller. People be come fonder of limeade than lemonade. It is more sensitive to frost than the Lemon. 20.c. each; larger and stronger, 35c. each, postpaid. (No other sizes to otrer.)
Everybody in Elorida, no matter how far north or west in the State they live, should have at least one Lemon and Lime, as they may be easily protected from all cold that ever visits this State by observing the directions for protection which we give on pages 2 and 3. Our Lemons and Limes are budded on Trifoliata stock, which renders them hardier and dwarfs them in size so that they are easily and inexpensively covered.

LEMON ON TRIFOLIATA STOCK.

POT ORANG上 UN TRIFOLIATA STOCK.
Pernambuco Pomelo (Grapefruit)-The Pomelo or Grapefruit is a most delicious fruit and of late years has assumed great commercial importance. Fruit hangs in clusters, is much larger than oranges, pale yellow, and has a slightly bitter pulp which is extremely wholesome and healthful. (The popular way of eating pomelo or grapefruit is to cut in two crosswise with a sharp knife, sprinkle liberally with sugar and eat with a spoon.) The Pernambuco is a fine late sort from South America, introduced through the Department of Agriculture at Washington. A good grower and heavy bearer, fruit medium to large size, the finest general market sort. Pot or tub grown Pomelos with their immense fruits attract much attention. Prices and sizes same as Oranges, page 3 .
"The budded Orange I ordered from you two years ago has 7 large and very juicy oranges on it. In March the tree was just covered with white and sweet blossoms. I never did eat an orange equal to these."-ANTON KANん, Texas.

## THE TRIFOLIATE ORANGE.

A beautiful Japanese Orange (Citrus Trifoliata) which has proved perfectly hardy-witho:it any protection-at least as far north as Philadelphia. A grand tub plant for all points farther north. It differs from other Oranges in having trifoliate or clover-shaped leaves, larger flowers which are produced in the greatest profusion and over a much longer season, frequently blooming two or three times during the summer. These are followed by orange-red fruits, about the size of a Mandarin orange, which are very ornamental but not edible. It is a dwarf plant, forming a beautiful shrub. from 4 to 12 feet high. It is the very best sort as a stock on which to bud or graft the larger growing edible varieties. As a hedge plant, either for ornament or defense, its value is unlimited. For a hedge, set the plants from 18 to 20 inches apart in a single row. Planted even further apart they will form a hedge which no animal can force. Strong, young, thrifty mailing trees, 15 c . each; 3 for 40 c .; 6 for 75 c . ; 12 for $\$ 1.25 ; 100$ for $\$ 6.50$. Fine plants 2 to 3 feet tall, by express, 2 bc each; 3 for 70 c . $; 6$ for $\$ 1.25 ; 12$ for $\$ 2.00$.

## BANANA (MUSA) SUMATRANA.

A slender growing sort of the most striking beauty and extreme rarity. Leaves deep green above, heavily blotched with large bright maroon spots of rather regular outlines; under side of leaf and stem marked solidly a deep copper color. One of the handsomest foliage plants in cultivation and makes a magnificent pot plant. Likes partial shade. Price, $\$ 1.00$ each.

## VARIEGATED-LEAVED OLEANDER.

A selection of choice Oleanders will be found offered on page 27, but we here offer a rare and strikingly beautiful variety. Its large, luxuriant, deep green leaves are broadly margined and variegated with creamy white, producing a most charming effect; and in addition it produces immense clusters of large double flowers of a delicate seashell pink color. 25c. each.

## Specialties in Plants, Seeds and Bullbs. JAPANESE CEDAR, OR SUGI.

In this rarely beautiful and unique Japanese evergreen (Cryptomeria Japonica) we have a most dainty and handsome jardiniere plant for general cultivation-a plant as beautiful as and more graceful than the rare and exquisite Araucaria Exceisa (for which indeed it is often mistaken)

AGERATUM PRINCESS PAULINE.

## AGERATUM PRINCESS PAULINE.

A new and most distinct and novel variety of dwarf, compact habit, rarely exceeding 5 inches in height. A peculiarity of this sort is that both colors, blue and white, are combined in the same flower; the body of the flower being white, while the stamens are of a sky-blue, giving the flower a very pretty variegated appearance.

## ery profuse bloomer. 10c. each

Ageratum Stella Gurney - Undoubtedly the finest Ageratum yet introduced. Of dwarf, compact, even habit, in color a fine deep blue and literally a shcet of lovely fluffy balls of bloom the entire season. Fine for bedding and borders in summer and for winter flowering in the window, as it will bloom the year round. 10 c .

## PANICUM VARIEGATUM.

A very beautiful grass of a trailing or creeping nature, exceedingly valuable for hanging-baskets or pot culture. Its slender, wiry stems grow 2 or 3 feet or more long, and are clothed their entire length with willow-shaped leaves which are distinctly and beautifully variegated with pure white, bright rose and green. It likes a warm place, and will grow in comparative shade, forming a dense, drooping mass of the loveliest coloring imaginable. Only 10 c each.

BUTTERFLY ORCHID. but which has the happy faculty of successfully withstanding the trying atmosphere of living rooms. It is the only plant at present known that is a perfect substitute for the Araucaria in appearance, and which can be grown with perfect success in any living-room. Of a beautiful dark green color and decidedly novel in appearance, it is as decorative as a Palm in any situation, and sure to attract instant attention. Nice plants, 20 c .

## GIANT CIGAR PLANT.

(Cuphea Eminens or Micropetala.) The cut does no justice to this beautiful but almost unknown plant. In beauty and appearance its flowers rival those of the Manettia Bicolor, while the plant grows with the freedom of a weed and blooms constantly-spring, sum-

GIANT CIGAR PLANT. mer, fall and winter. Each stem is surmounted by a spike of flowers, varying in number from 6 to 20 or more, the individual flowers from 1 to 11 inches in length and $1 / 4$ inch in diameter, in color a rich scarlet, tipped with bright yellow. When cut and placed in water, the spikes remain fresh and blooming for 2 weeks. Equally adapteu for pot culture or summer bedding. 15c. each; larger, 25. each.

JAPANESE CEDAR, OR SUGI.

## BUTTERFLY ORCHID.

This exceedingly beautiful Florida Orchid (Epidendrum Venosum) is very hardy, standing quite severe frosts, and will thrive anywhere that a Geranium will. All that it requires is to be fastened on to a rough block of wood or bark and be dipped into water frequently. The plant is composed of a mass of green bulbs and stifi, thick, waxy leaves. In summer it produces long spikes of showy flowers, an inch or more in diameter, of beautiful shades of pink and greenish-chocolate color, changing with age to rich yellow and chocolate. May be grown in pots of peat, moss and charcoal mixed, as well as on wood. Nice plants, 15c. each; or nicely blocked and ready io hang up, as shown in illustration, 35c. each. Very fine, large ciumps (unblocked), 30c. each. Anyone can block them with some tacks and wire.

## ALOE VULGARIS.

The plant from which the "bitter aloes" of medicine is oBtained. A striking plant with its thick. fleshy, serrate leaves and beautiful spikes of yellow flowers. A fine companion for Cacti and other succulents, and of easiest culture. 15. each; larger, 25 c. each.

## SPANISH MOSS.

The long, graceful, silver-gray festoons of this beautiful Air Plant - erroneously called a moss-hang like long streamers from the limbs of the trees, producing an indescribably beautiful effect as it waves back and forth in every passing breeze. In the North it can be used with the most charming effect for draping over picture frames and rustic work in the livingrooms, and for decorating Christmas trees and booths at church fairs, etc. It remains fresh and beautiful for months, and if occasionally taken down and thoroughly wet will remain fresh and growing for an indefinite period. The longest and most perfect strands, 20 c . per pound. (To Canada, price 30c. per pound.)
Anyone adding 10c. to his oflder for plants or bulbs can have it packed in a liberal quantity of Spanish Moss. Everybody is delighted with it. Besidcs, plants or bulbs packed in it are doubly safe. See offer on first page.

## CAREX JAPONICA.

A beautiful Japanese grass of most graceful, fountain-like habit, especially beautiful for table decoration, etc. There is no hint of stiffness-to the contrary, it is a picture of grace and motion, and is a real acquisition. 15c. each.

CAREX JAPONICA.

## CHENILLE PLANT.

## (Acalypha Sanderi, or Hispida.)

A most remarkable plant. Out of the axil of ev ery leaf grows a spike of blossom, glowing crim son-scariet in color, 20 to 30 inches long, as large around as a person's finger, and looks exactly like a long piece of crimson-scarlet chenile cord.They last for weeks beıore fading, and before they fall off from 1 to 2 or 3 other spikes have started out in the same leaf-axil, and it is thus always in bloom from January to December. It is the most showy pot plant imaginable, and also fine for outdoor planting in summer. Fine plants only 15̄c. each.

## SKY ROCKET.

(Clerodendion Siphonanthus.)
This is a most striking and distinct plant. Its Geshy root is perennial, but its stems are renewed annually. These stems grow to a height of 10 or 12 feet in the open ground here in Florida, but under pot culture they grow only 3 or 4 feet. They are clothed from the ground up with long, pointed leaves in whorls of four, overlapping each other

CHENILLE PLANT. like shingles and hiding the stems completely. Each stem is surmcunted by a large panicle of creamy-white flowers with very slender, slightly curved tubes from 4 to 5 inches in length. After the flowers fall, the calvxes turn to a deep dark-red and the fleshy seeds are greenish-purple. These seed-heads are highly ornamental, last perifect on the plant for weeks, and are so large and heavy that the stems bend and sway beneath their weight. Grows as freely and easily as a weed, either from the root or

"BIRD CACTUS."

## "BIRD CACTUS."

## (Pedilanthus Tithymaloides.)

A curious West Indian plant, not a true Cactus at all, but belongs to the Euphorbia Family. Its stout round stems are clothed with fleshy leaves from the axils of which appear small red showy flowers. The latter look strikingly like little birds sitting back-to with the tops of their heads, wings and backs bright scarlet, and the stamens and pistils forming the tail feathers. A fine little pot plant of the easiest culture, blooming during the winter months. A fine companion for Cacti, etc. 15c. each; larger, 00 c .

## RUSSELIA ELEGANTISSIMA.

This is a new hybrid which is a great improvement on the old Russelia Juncea, or Coral Plant. It is of a drooping nature, forming a mass of long, slender, rush-like stems, which are covered with a shower of brilliant scarlet tubular flowers, forming a perfect fountain of green and crimson. The plants begin flowering while ery small, and make a succession of new growths, each stronger and more floriferous. Particularly fine for vases, hanging baskets, etc. 15c. each.

SKY ROCKET.

RUSSELIA ELEGANTISSIMA.

STROBILANTHES DYERIANUS

A very beautiful foliage plant which surnasses the finest Coleus in the exquisite coloring of the leaves. Forms a compact plant, 18 inches high, with smooth leaves 6 to 9 inches long and 3 to 5 inches wide. The undulation on the surface of the foliage is furnished with a bluish metalic hue, shading into bright rosy-purple in the center, with light green or grayish-green edges. Produces terminal erect fl-wer spikes 6 inches long, and at a time-in mid-winter-when they will be most appreciated. It is just as easy to grow as Coleus, and bedded out in the hottest sunshine thrives to perfection and colors up grandly. Pleases everybody. Nice plants, 10c. each.

## VELVET PLANT.

(Gynura Aurantiaca.)
A plant of the greatest beauty and just as easy to grow as a Coleus. No other name would be so appropriate as Velvet Plant, for so close is the resemblance that on first sight the plant is almost invariably taken to be artificial. Its stems and leaves are entirely covered with clistening purple hairs, and to the touch are as soft and downy as a piece of rich velvet. They shine and glisten and reflect many shades of color, every time the plant is moved the color of the foliage seeming to change. The more sunshine it receives the darker the color of its foliage will be. 15c. each.

## TRADESCANTIA DISCOLOR.

Upright-growing, like the Agaves, reaching a heicht of from 12 to 18 inches; leaves sword-shaped, stiff and fleshy. rich green above and bright purple beneath. the twn colors forming a beautiful conrast. Very striking. and of easiest growth. 15c. each; much larger and very fine, 35 c . each.

fruit plant makes a magnificent bedding plant for all parts of the country-North and South-and is as easy to grow as a Castor Bean. It forms a branchless, Palm-like trunk clothed with the grandest leaves. each \& to feet in diameter. deeply cut and divided, of a rich dark-green color, with white midribs and reins, forming a beautifu! contrast. If set out in good soil after all danger of frost is past, it will erow with amazing rapidity, attaining a height of 10 feet or

## CUBAN HOLLYHOCK OR SOUTHERN BEAUTY HIBISCUS.

We have learned since we gave this plant the name of Southern Beauty that it is a great favorite in Cuba and is known as the Cuban Hollyhock. In the open ground will grow to the height of 8 or 10 feet, if alowed to do so; but it is better to keep it pinched back to a neight of 4 or 5 feet. Every limb and twig is clothed with deeply 5 -cleft leaves, the segments tocthed and crimson-margined. In late summer and fall (until checked by frosts) it covers itself with extremely handsome and very striking flowers, in color deep crimson, shading deeper in the throat, which is almost black and velvety. As a pot plant it commences to bloom while very small, and we have had them in thumb-pots carrying howers arger than
plants themselves. 1 c .

## MELON PAPAT

 ing fresh and vigorous. As a pot plant the Melon Papaw is highly decorative and very unique.carcful not to bruse sitior tine rosi ue stems. We senz cut the plants with the ball of earti anout With them a wonderful tropical effece may be obtained in the garden or on the lawn. Produces flowers in long racemes, which are palc yellow, wax-like and exquisitcl f-a r-nt. (Ser further 20c. each; 3 for 50 c .

## BLUE AGAPANTHUS.

(Liiy of the Palace.)
Flower staiks 2 to 3 feet tall, crowned with immense umbels, of from $\$ 0$ to 100 exquisite long-tubed, lily-like, sky blue flowers which remain unfaded for weeks. One of the grandest pot plants in cultivation. Should be given an abundance of water in summer, while growing and flowering, but allowed to rest over winter in cellar or pit. Fine

AGAPANTHUS OR LILY OF THE PALACE.

TALINUM PATENS VAR.

## TALINUM PATENS <br> VARIEGATA.

A most beautiful succulent, but shrubby dwari piant, not over 18 inches in ultimate height. Leaves thick and fleshy, splendidly variegated with creamy white edged with pink and blotched with gray and emerald green. Bears queer little pink and yellow flowers. Of easiest culture and equally adapted for pots or bedding out in summer. 15c. each.

## COSMOS.

Klondyke-New and entirely dis. tinct in every way. having rich, bril. liant orange-yellow flowers and beautifully cut Chryanthemum-like foliage, with many petioles and midribs of 2 rhubarb-red hite is the front. The plants grow very large and bushy, and in fall are completely covered from top to base with innumerable rich, orangeyellow flowers $21 / 2$ to $3^{1 / 2}$ inches across, producing the most brilliant effect imaginable. Lift and pot before frost and it zuill be a blaze of flowers uitil the holidays, rivaling the Chrysanthemuns in beauty and brilliancy. Or may be grown in pots from the start, and the plants kept much more dwarf. A grand flower. Seeds, per plot., 5c.

## ASPARAGUS

SPRENGERI
This is one of the most distinct of atl the indoor sfecies of Asparagus. Its plume-like growths of a tresh, light or apple-green hue are thrown up in a
free manner to a lengih of 3 , or even $\$$ or 10 feet, drooping gracefully and natura'ly from pot or hanging basket. It remains fresh and fair all the year round, and in water it will remain fresh for 6 week = after cutting, and we have had it remain fresin on the walls perfectly dry for 2 weeks. It succeeds perfectliv as a house plant and everybody should grow it. Price of plants only 10c. each: larger, 25c. each. (For other ornamental Asparagus, see page 20.)
"My Asparagus Sprengeri, bought less thon 2 years ago. has fronds or trailers chout $\overline{5}$ feet long."-IIRS. E. L. KIP
LINGER. CUT ON THIS LINE.

Notice. If your order amounts to a free tuber of the beautiful SEE REVERSE SIDE.

## QUEEN LILY．

A species of Curcuma．Sends up numerous broad－bladed，rich greert leaves，which are broadly－veined and beautifully arched and a torch－shaped flower－head，consisting of num－ erous large bracts，which are pure white， beautifully tipped and tinted with pink，and lase in perfection a full month．Just under these bracts the true nowers appear，yellow （sometimes white or pink）in color，and looking something like little birds with raised wings．A fine pot plant，or may be grown in the garden in partial shade．If it never bloomed it would still be as decora－ tive as a ralm．In winter store pot of dry soil and tubers in a warm closet or cellar． Hardy in the latitude of New Orleans．Fine tubers，only 10c．each．

BUTTERFLY LILY．
The Hedychium Coronarium of the East In－ dies．The cut conveys but a slight idea of the chaste beauty of tne large，snow－white ana exquisitely fragrant flowers，looking al－ most like a bevy of large white butterflies hovering over the plant．Both plant and foot are Canna－like，the shoots attaining a height of from 2 to 5 feet and surmounted by large terminal clusters of the beautiful flowers．It cannot be given too rich a soil or too much heat and moisture when growing．As a pot or tub plant it is truly magnificent．Frequent applications of liquid manure are beneficial， and also keeping the pot standing in water 2 or 3 inches deep．Fine roots，only 10c．
＂Oin my Butterfly Lily have been 8 flower． stalks in bloom continuously since Sept．1st． On quiet evenings the odor is noiiceable for 30 feet away．＂－S．S．ROPER，N．J．

CLIMBING LILY．
SHELL LILY．

## （Alpina Nutans．）

Sends up arching stems clothed with de lightfully aromatic，rich green leaves，and ter minated by racemes often 2 feet lung of bril liant，Orchid－like flowers，each shaped like an exquisite crinklea snell，and in co．or yell w， Jrange and white delicately combined and strik－ ingly contrasted．Almost as ornamental as the finest Palm，and will grow to perfection for anybody．The Arabians call the leaves＂angels＇ wings；＂they retain their fragrance long after being dried．1כ̄c．each．

## PHRYNIUM VARIEGATUM．

A most elegant plant for either pot culture or the open ground in summer．The shoots grow from a foot or 18 inches to 3 feet high，and the leaves are from 6 to 10 inches long and 2 to 6 inches broad．They are bright，pale green， beautifully variegated with pure white and rich cream，the variegations being extremely diver－ sified；indeed it is almost impossible to find two leaves exactly alike．In some leaves the Whole area is pure white or rich cream color， in others only one－third or one－half，while in others it is reduced to a few stripes or faint lines－and all these variegations in one plant． It is a grand plant to border Canna and other beds with．Tubers may be wintered dry like Gladiolus． 15 c ．； 3 for 40 c ．； 6 for 75 c ．； 12 for $\$ 1.30$ ．

## CLIIVIBING LILY．

The Gloriosa Superba．A very rare and ex－ tremely showy plant of the Lily family，sub－ climbing in habit，and requiring a light trel－ lis for support．Under favorable circum－ stances it will attain a height of 6 to 8 feet and bloom profusely the entire summer． Howers axillary，in racemes at the ends of the stems，which bear leaves remarkable in having tendril－like apices．The flowers bear as close a resemblance to Lilium Phila－ delphicum as to almost any other form，are curiously shaped，the petals narrow，turned back and up，erect，deeply undulate，and of a rich orange and red color．Should be grown in a pot of light，sandy soil，with good drainage，giving plenty of heat and moisture in summer．As the growth ripens in fall，water should be gradually withheld， and during winter the soil must be kept quite dry and the pots in a warm place（a closet，for instance）．Exposure to cold when at rest is a point specially to be avoided． The seasons of growth and complete rest in a warm place are the most important con－ siderations in its culture．Tuhers．20c．each．

PHRINIU゙M \AR1LGA」し，

## ROSA DE MONTANA.

Botanically, Antigonon Liptopus. A splendid tuberous climbing plant of Central Mexico, described by its discoverer as one of the most beautiful climbers he had ever beheld. Its beautiful rose-colored Howers are produced in racemes 2 feet long, and in such profusion as to give the resemblance of Roses at a distance; hence one of the Mexican names is Rosa de Moitana, or Mountain Rose. In the North it should be win tered in the house or cellar, but in the South it is perfectly hardy, thriv
ing wonderfully, and slould be found in every
yard. II ill probably prove hardy much farther

## THE KUDZU VINE.

(Pueraria (Dolichos Japonicus) Thunbergiana.)
This Japanese climber is the most rapid growing vine known, sometimes 13 inches in one day and 75 feet in a season. It has a tuberous root, which is perfectly hardy everywhere, and in spring sends up vig. orous shoots which will quickly shade an entire piazza front and clamber to the top of the house if allowed to. It was first brought to Philadelphia at the time of the Centennial by the Japanese, who planted it in their department of the Expocition to produce the quickest possible effect. Its foliage is very luxuriant-much like immense bean leaves-and its rose-colored or purple and fragrant flowers are produced in large clusters. For covering porches, arbors, fences, stumps, dead trees, etc., with a luxuriant curtain of foliage and in the shortest possible space of time, there is no climber that can equal it. Price, only 15 c . each.

THE BOSTON FERN.

Pierson Fern-A sport from the Boston Fcrn, of remarkable appearance and great beauty. Instead of the fronds being simply pinnate (as in the original form) the pinnae have become divided, making the frond twice-pinnate. The fronds grow broad and heavy, at least 6 inches across when fully devcloped, and of exceedingly graceful appearance. A rare novelty of recent introduction but just as easy to grow as the Boston variety. Nice plants. 2 sc . each. Strong plants, 50 c . each, postpaid.
For Other Ferns see page 13 .

ROSA DE MONTANA, OR ANTIGONON LEPTOPUS.

SANSEVIERA OR ZEBRA PLANT.
If a plant is wanted to grow anywhere, in or out of the sun, to stand drought, dust and heat, and always look ire ih and healhy, order one of these Sansevieras. They are beautiful plants, splendidly adapted for the decoration of rooms and halis, for centers of vases, baskers, etc., as they stand all manner of abuse (except freezing and over-watering) with impunity, even preserving their cheerful look when you have forgotten to water them for a month.
S. Zealanica-Zebra Plant-This is also known by some as the Alligator Lily. Leaves grow to a length of 3 to 4 feet, and are beauiifully striped and variegated crosswise with white on a very darkgreen ground. Native of India, where it is known as Murvy. IJc.
S. Guineensis-African Bow-String Hemp-lery omamental, and a fine companion plant for the above. Its long, straight swordshaped leaves, growing from 3 to 6 feet long, and from 2 to 3 inches broad, are beautifully mottled gray and edged with brown. Native of

## BAMBOOS.

These are becoming very popular for pot culture owing to the ease with which they may be grown and their very distinctive and ornamental appearance. They are as decorative as Palms, and as easy to grow as weeds, long-lived and constantly improving with age, and proof against the dust, gas and fluctuating temperature of living rooms. In Florida, and other parts of the South, they will make grand clumps in the open ground. All four of the varieties offered below are hardy all along the Gulf coast, or in a temoerature as low as 10 degrees or 15 degrees above zero without serious injury, while

SANSEVIEKA.

Bambusa Argentea-A very hardy Japanese species, eventually reaching a height of 35 or 40 feet in the open ground. The under side of the leaves is a glaucous-green, and the canes and foliage resemble immense drooping plumes. A graceruı pot plant, and a majestic object in the open ground. Strong, heavy plants, by mail, $35 \bar{c}$.; by express, 25 c. eac'. 1.
B. Argentea Striata-Exactly like the preceding except that its foliage is beautifully var* iegated white and green. Strong. heavy plants, by mail, 3j.c.; by express. $2 \overline{5} \mathrm{c}$. each. B. Aurea-Stems yellow and leaves light suen. Grows 8 to 12 feet high. very B. and beautiful. An especially desiratle sort for pot culture. Price, 30 c . each. B. Metake-Leaves broed, thick and very strong. Distinct and highly ornamental. Grows about 10 feet high. Very fine for pots and tubs. Price, 20c. each.

## NEW GIANT BROWALLIA.

If the young plants are frequently pinched they will grow in nice bushy form-much prettier than in the cut-or if let alone the branches will trail over the sides of the pot, forming a very pleasing effect. Tiny cuttings begin to bud and bloom*as soon as rooted and potted up, and from then on are never out of flower. A plant under our observation was not without flowers in 2 years. The fiowers measure from $11 / 2$ to 2 inches in diameter, and vary in color from a light blue to a deep violet-blue, with an almost white eye. It is just as easy to grow as a Geranium, anu its color-blue-rare among houseplants. Yoes equally well as a winter-bloomer in the house, or a summerbloomer in the garden. Nice little plants ready for immediate flowering, only 15 c . each.

## VARIEGATED-LEAVED PINEAFPLE.

A most beautifully variegated form of the Smooth Cayenne Pineapple so largely grown for market. In this variegated form the leaves are richly marked with longitudinal stripes of white or cream, and at certain seasons or certain stages of growth these variegations are shaded bright pink-a combination of the most exouisite beautv. It is very rare and one of the handsomest variegated plants known, in addition to which it is of easy cultivation in the living room window and will delight every lover of fine foliage plants. Price of strong plants, $\$ 1.00$ each

## BILLBERGIA OR LOBSTER ORCHID.

Not a true Orchid but one of the air-plants, though best grown in a pot of fibrous peat or soil and moss mixed, kept always moist but with good drainage. Forms a whorl of green foliage which holds water and produces apikes of exceedingly rich bright mink flowers (bracts) which last a long time. 20. each.

## CURCULIGO RECURVATA.

A Palm-like roliage plant much resembling a young Cocoanut Palm. Does not make a stem or trunk but sends up broad-bladed, ribbed leaves which are beautifully arched or recurved. Very decorative and fine for vases and jardinieres. Strong plants, 25c. each; plants 2 to $31 / 2 \mathrm{ft}$ high, by express, 35 c

## SANCHEZIA NOBILIS GLAUCA.

A magnificent foliage plant from Ecuador. Leaves grow a foot in length, of a glaucous green, handsomely veined and marked with bright yellow and white. Flowers yellow with bright red bracts. A beautiful pot plant, and also does finely bedded out in the full sun. 20 c . each.

## SELAGINELİAS.

Curious and delicately beautiful plants, which require about the same treatment as Ferns. Some are erect, with large, spreading, Fern-like fronds, invaluable for cut-flower work, while others are prostrate and creeping, forming an excellent groundwork for Ferneries. We can supply three very handsome species, all different and very choice, including S. Emiliana, offered below, for only 25 c .
S. Emiliana-A new upright variety, with stems branching from the base and forming a dense tuft. An exceedingly beautiful sort which is often mistaken for some kind of rare Fern. 1oc. each.

VARIEGATED-LEAVED PINEAPPLE.

## Fancy-Leaved Caladiums.

Simply wonderfui in the colorings and markings of the leaves, embracing every degree and shade that can be formed of pure white, deep green and intense crimson. Some idea of the manner of these variegatiums may ve formed from our cut. Uf special value for pot culture and for window and piazza boxes. W'hen the foliage dies down in the fall, let the soil go dry, then set them away in a warm, dry, frost-proof closef, without disturbing the tubers. In the spring turn them out and repot in fresh sandy soil. Or first, they may be quickly and easily sprouted in damp moss set in a warm situation. Most of the varieties planted about June 1st in partially shaded borders succeed admirably as bedding plants.
Boildeau-Body of leaf medium green with delicate veining of scarlet; enter of leaf and ribs deep rich scarlet. 15c. each.
Ed. Moreau-Ribs rich glossy crimson; center of leaf darker crimson; body of leaf rich dcep green, profusely spotted with irregularly-shaped white blotches changing to rose-pink. 15c. each.
Devinck-Green ground thickly splashed and spotted crimson; ribs pink bordered gray and scarlet. 15c. each.
Houletti-Deep green ground; white ribs and center, bordered gray; thickly spotted white. 1ŏc. each.
Jupiter-Deep green ground, mottled and spotted white with deep crimson splashes: stems ebony. 15c. each.
Rossimil-Ribs and center of leaf rich crimson; body of leaf rich deep green, with a few large, irregular, bright, blood-red blotches which look as though varnished. Very beautiful. 15c, each.
Wightii-Entire leaf uniform green with silvery white blotches and a lesser number of larger crimson blotches of very irregular shapes. 15̄c. each.

## Special Offer-Any 3 of the 15c. varieties for $3 \bar{c} c$.

## New or Very Rare Fancy-Leaved Caladiums.

Arrasuahy-Entire grolund of leaf deep rose-pink over which is spread a net-work of vivid green ribs and veins. A combination unusually beautiful and indescribable. 30 c . each.
Baron de Mamore-Very deep green ground thickly specked, spotted and shaded white, more or less suffused crimson; ribs and center of leaf deep shining maroon; ribs bordered maroon and veins and nerves same color. Exceedingly rich and beautiful. 30c. each.
Cacapava-Cream ground shaded green toward edge of leaf; ribs deep rich scarlet with border of same color. Very beautiful sort. 30c. each.
Candida-Center of leaf a big blotch of purple madder dut and divided by white or cream ribs and bordered with gray shading off into a green ground. Fine contrasting effects. 20 c . each.

Chantinii-Green ground, ribs light maroon, bordered white; center of leaf green. Numerous large and small spots and irregular blotches of a rich, deep scarlet. Striking. 20c.
Cream and Crimson- Body of leaf cream, slightly suffused green, marked with light pink spots that are bordered white, Delicately beautiful. 20c. each.
Dr. Augustine de Castro-Green ground specked, spotted and splashed white suffused pink. Ribs deep scarlet. A handsome sort. 30c. each.

Duc de Nassau-Deep green ground uniformly spotted with irregularly shaped deep pink blotches with narrow white border; ribs brilliant crimsun bordered light crimson. 30c. each.

Guadalajara-Cream ground shaded green, thickly marked with white blotches and spots changing light pink. Delicate and beautiful. 30c. each.

ALOCASIA ILLUSTRIS.
Harold - Medtum green ground, spotted and splashed white; center of leaf gray, ribs deep crimson. Magnificent. zuc.
Itapaca-Ribs deep maroon, bordered deep rich crimson. Dark green ground veined, nerved and spotted rich crimson. Exceedingly fine. 50 c . each.
Junaro - Green ground with numerous small white spots shaded pink; ribs and center deep crimson. 20c. each.
Karmel - Ground work of leaf puckered and crimped, pure transparent white, veined and ribbed with deep velvety green. Looks like a piece of mosaic done in white and green. Simply exquisite. 30 c . each.

Lunocera-Body of leaf deep metallic green, specked, spotted and shaded rich rose-pink shading to rich dazzling crimson at the center. The whole leaf is lustrous and around the border are many intense crimson spots. 30c.
Otono (meaning autumn)-Ribs deep lustrous crimson widely bordered purple madder shading off to a speckling of crimson. Deep green around specked, spotted and blotched crimson in a manner which suggests its name. 50c. each.
Pilota-Deep maroon ribs bordered deep crimson. Green ground thickly spotted and splashed with irregularly shaped pink spots which change to light pink and white in some growths.

FANCY-I EAVED CALADIUMS.
Rich and striking. 40c. each.
Richenbachian-Medium green ground, ribs pale pink, center rich rose-pink bordered gray, the whole marked with a few small scarlet spots. 20 c . each.

Rio Clara-Light green ground thickly spotted and splashed white; center of leaf light violet, ribs and nerves deep pink. 20c.
Roncador-Pink and white ground, green ribs and veins. Presents a chaste appearance. 20c. each.
Sanchoniatum-Dark crimson ribs widely bordered lighter crimson shading off gray; the deep green ground richly marked with numerous rich pink spots and blotches edged white. 30 c .
Splendidum-Ribs deep scarlet bordered with wide zone (leaf center) of crimson maroon. Deep green ground nerved and veined crimson. Very rich. 25c. each.
Triumph de Exposition-Medium green ground, ribs a deep crimson bordered pink; center of leaf light crimson shading off into greenish pink. 50 c . each.

Unigue-Light green ground with dark green veinings and shades of gray. Ribs rich scarlet bordered scarlet shading off into gray, which in turn shades away into tne green ground. Unique and handsome. 50 c . each.

Wilma-Deep Iustrous green ribs and veins, body of leaf most elegantly and richly marked in shades varying from nearly pure white to rich rose-pink. While the leaf presents an unusual richness and delicacy of marking, it is heavy in texture. 20c.

## ALOCASIAS.

Rare and very choice foliage plants belonging to the Caladium family, and very striking and beautiful either as pot plants or bedded out in summer. Elegant for vases and piazzas.
Bataviensis-Has the same general habit of growth as Caladium esculentum; the leaves a very peculiar shade of very dark green, while the leaf stems are purplish black covered with a whitish bloom. Very handsome and desirab!e. Tubers, 20c.
Illustris-Leaves bright green, but so heavily blotched with black purple that the green appears in the form of broad veins and borders; one of the most beautiful and striking sorts of all. Attains a height of 3 or 4 feet, and will grow in shallow water or a very wet place. Alsn tine fnr pots or lavn. Tuhers. 1ăc.
Javanicum-Annther enually rare and beautiful. Its leaves and stems are of a hlitich onlnr: entirely different from the above, and, with its big chipld-shaned leaves, presents a striking tropical appearance. Tubers, 15c. each.
Marshallii-Of medium size and very quick growing; green leaves and dark stems. Tubers, 15c. each.

## WEEPING LANTANA.

This is in reality the old but rare Lantana Delicatissima, which has been introduced at the North as a new weeping variety. However, it is one of the very best, and should be grown by everybody. Fine for baskets, vases, pots or window boxes, also for training on trellises. Proauces a great abundance of delicate, drooping, leafy vines, covered nearly all the time with large clusters of lovely lilac flowers with white eye. The color is an exquisite shade which never fails to win the admiration of the ladies. Tiny plants in thumb-pots bloom beautifully and constantly. Only 10c. each; 6 for 50 c .

## PANAX VICTORIAE.

An elegant variegated pot-shrub from the South Sea Islands The cut falls very far short of doing it anything like justice, and no adequate idea of its beauty can be conveyed by the pen. The leaves form a dense, plumy, gracefully recurving mass of foliage, and the whole appearance of the plant is graceful and distinct in the extreme. The lateral leaflets are forked or trifid, and the upper and terminal one larger, the edge lobed and spinosely toothed, and having the border prettily margined with white. Elegant is the word which best describes it, and on seeing the plant one instinctively classes it with the Palms, Ferns and other floral aristocrats. But it is not a bit dirricult to grow; if care is taken not to allow it to become chilled it will succeed perfectly in any liv-ing-room window. It makes an elegant table plant. Catalogued only a short time since at $\$ 1.50$ each. Our price of nice plants, only 35 c. each.

PANAX VICTORIAE.

## TRAILING BEGONIA.

This is not a spe-

cies of Begon:a, botanically it is Cissus Discolor, but is called Trailing Begonia from the coloring and marking of its leaves. It is undoubtedly the most beautiful leaved climbing plant in cultivation; in fact, no known plant can exceed its rare beauty in the matter of foliage. The leaves are long, heart-shaped and as richly colored as the finest Begonia Rex. The mid-rib and slightly toothed edges are red while the rest of the upper surface is silver and bronze green-the latter very dark along the crimson mid-rib and looks like bronze green velvet. The under sides of the leaves, the leaf-stems and the young vine-ste are transparent wine-red. It will cover a trellis completely all over, the elegant leaves overlapping each other like shingles. It is a very kept and the more sun it gets the richer the coloring will be. Where sufficient heat cannot be given it during winter, its leaves will ripen and gradually fall off and the vine remain in a dormant condition until spring, when it will start into growth at every joint and make a magnificent display all the summer and fall. 13.c. each.

## MARANTAS.

Bicolor-A fine ornamental variety about a foot high and of close, compact growth. Leaves orbicular, ground color pale glaucousgreen, with irregular-shaped blotches of polished dark olive midway between the mid-rib and margin; under surface of leaves rosy purple, furnishing a fine contrast. 15c. each.
Massangeana-A beautiful and most useful dwarf growing variety, especially adapted for use in connec-
 tion with Ferns for filling Fern dishes, jardinieres, etc. Its leaves have an exquisite, silky appearance and are beautifully covered with rich markings; the outer portion is olive-green, the middle a silvery gray color, ornamented with large blotches of dark velvety purplish maroon. It is of a much neater habit of growth than the cut indicates. Fine plants, 20c. each.

## OTAHEITE ORANGE.

This wonderful orange is a natural little dwarf, growing no larger than a good specimen Geranium, and equally easy to manage. Incredible as it mav seem, it has produced flowers and ripened its fruit perfectly in 2 -inch pot. Its beautiful blossoms are produced in the greatest abundance, are as fine and large as other Orange flowers, and possesses the same delicious fragrance. The fruits are about half the size of ordinary oranges, but of an insipid flavor. It is not unusual for the plant to produce a full crop of the exquisite flowers while yet frill of its pretty fruits. It is a plant of remarkable beauty, and has received unstinted praise from every quarter. Fine mailing plants, large enough to bloom, 15c. each.: 3 for 40 c .
For Edible Fruited Oranges see pages 3 and 4.

TRAILING BEGONIA.

MARANTA MASSANGEANA.

## SAGO PALM OR CYCAS REVOLUTA.

This is the so-called Sago Palm, and is sometimes called the Japanese Fern Palm, which is a very appropriate name. In young plants the stem is bulb-like, but develops into a stem or trunk as it grows older. The leaves, which are like elegant Fern fronds, are remarkable for their great beauty, which is retained for years. as the leaves do not die and drop off every year, as they do on most plants. While the trund-like leaves are of most graceful appearance, they are also of a firm, strong texture and difficult to injure. They are of a dark, deep green, and look as if varnished, which gives them a beautiful, shiny appearance. The leaves are -in great demand for floral decorations, and oiten sell for two dollars each. It may be well termed a "Family plant," as it lives to a great age and can be kept in the family from generation to generation, growing finer and more valuable every year, proving an indispensable decoraticn for all occasions̄. As a decorative plant, both for indoor and outdoor (summer) use, it is without a rival, for its noble and majestic nabit is most impressive; and it is very hardy, its heavy, glossy fronds resisting alike the gas, cold and dust to which decorative plants must be frequently exposed. It is suited with any good garden soil. Pots should be well drained, and water appled sparingly during the winter. Northern florists catalogue this plant at from $\$ 2.50$ to $\$ 100$ each, according to size, which of course keeps it out of the hands of flower lovers in general. We are glad to offer nice plants with 2 to 4 leaves at 50 c . each, postpaid; with 5 to 8 leaves, $\$ 1.00$ each, past paid; with 5 to 8 leaves each 15 to 20 inches long, by express, $\$ 1.00$ each; with 10 to 18 leaves each 15 to 24 inches lone, by express, $\$ 2.00$ each; with $1 \hat{E}$ to 30 leaves each 15 to 30 inches long, by express, $\$ 3.00$ each; with 25 to 45 leaves, each 20 to 36 inches long, by express, $\$ 5.00$ each.

Note-We have beautiful specimens of all sizes up to plants worth $\$ 10$ each. Particulars as to prices, sizes, etc., will be cheerfully furnished on correspondence.

Preminm Offer-As an inducement to effort ior Club Orders, or large individual orders, we will give a fine $\$$ Sago Palm on orders amounting to $\$ 10$ or over and going by express at purchaser's expense but witnout other Premiums of any kind whatever except on the amount over and above \$10. See "Premiums," page 1, and "Notice," and "Check' at foot of Pages 7 and 8.
"Just receized Palws, etc., by express this morning and am more than pleased with them; they are simply fine, especially the Sago Palm, for w'ich size you sent, if bought at any place near here, would probably cost at least 3 times whut I paid for this one." - . MELLE LA. $\boldsymbol{V} E Y$, Ind.

DRACAENA TERMINALIS ROSEA.

COONTIE, OR ZAMIA INTEGRIFOLIA.

cycas REVOLUTA, OR SAGO PALM.

## COONTIE. <br> (Zamia Integrifolia.)

This strikingly beautiful and interesting Cycad, a native of the extreme southern part of Florida, is something between a Palm and a Fern, but is nesther, and is of extreme stateliness and beauty. The leaves are pinnate and Palm-like, but coiled in the bud like Ferns, and retain their beauty for some years. The beautiful flower head is like a pine-cone in shape, appearing as if stamped out of rich maroon velvet. When ripe it bursts and exhibits its glossy, rich yellow seeds, which change to red. It makes a magnificent decorative pot plant, standing heat, dust and almost any amount of abuse, and is a fine companion for the rare Sago Palm, which it somewhat resembles, though entirely distinct. In Europe the Coontie is so rare and highly prized as to be catalogued at from $\$ 10$ to $\$ 15$ each. The plants we offer are all pot-grown, beautiful specimens, with fine fronds (leaves) and an abundance of roots, ready for immediate effect, and all sure to live and thrive. First size, with nice foliage. 35 c . each postpaid; second size, larger and exceedingly fine foliage, 50 c . each, postpaid.

## DRACAENAS OR DRAGON TREES.

Braziliensis-A very robust grower, with broad, rich green foliage. Very bold and striking -a really tropical appearing plant. 20 c . each: larger, very fine, 40 c . each.
Cooperi-A beautiful form of $D$. Terminalis, with gracefully recurved leaves which are of a deep vinous red. A splendid decorative plant. 20c. each; larger, very fine, 40c. each.
Draco-The true Dragon's Tree and a very decorative species. Leaves stiff. sword-like and glaucous green. 20 c . each; larger and very fine, 50c. each.
Fragrans-A quick-growing sort with broad, green leaves; makes one of the finest and handsomest plants for either home or conservatory decoration. Very easily grown, making fine specimens in a short time. 20c. each.
Sanderiana-A very distinct and decorative sort. Stems clothed with small glaucousgreen leaves edged with a border of creamy white. Fine for centers of Fern-dishes, table decoration, etc. A comparatively new and greatly admired species difficult to describe adequately. 25̆c. each.
Terminalis Rosea-A magnificent decorative plant, with gorgeous shades of bright carmine, bronzy green and pink on the foliage. It ranks among the most beautiful foliage plants, and in either large or small state it is alike elegant and attractive, its richly colored leaves giving a splendid tropical effect. Makes a beautiful piazza plant in sum mer and window plant in winter. 25 c. each; larger, very fine, 35 c . each.

## TWO FINE FERNS.

DAVALLIA Stricta-A Fern of great beauty from the Malayan Archipelago, and perhaps the easiest of all Ferns to manage. it thrives finely in a shady window, and the fronds being finely cut and feathery-yet of a strong texture and a beautiful shade of green-it makes an exquisite table plant. Does not grow over 2 feet high ultimately, but as a pot plant usually remains much smaller. 15c. each.
LYGODIUM Scandens (Japanese Climbing Fern)-A delicately and exquisitely beautiful Fern which climbs and twines like any vine and is as easy to grow as Ivy or Smilax. The vines or stems are very slender but wiry and give a lovely effect on a slender trellis or running on threads. Everybody would grow it if they knew how distinct and beautiful it is. 15c. each.

## CHEAP PALM COLLECTIONS.

Palm Collection A-Four plants: one each of Caryota Urens (20c. size), Sabal Palmetto (15c. size), and one each of Aspargus Sprengeri (10c. size) and Dracaena Terminalis Rosea ( 2 j̄c. size), amounting at Catalogue prices to 70 c ., sent postpaid to any address for only 50 c .
Palm Collection B-Four plants; one each of Caryota Urens (20c. size), Chamaerops Excelsa (25c. size), and one each of Asparagus Sprengeri (2כ̌c. size) and Dracaena Braziliensis (20c. size), amounting at Catalogue prices to 90 c ., sent postpaid to any address for only 60 c .
Palm Collection C-Four Palms; one each of Phoenix Cycadifolia, P. Farinifera, P. Paludosa, P. Pumila, Tōc. size of each, amounting at Catalogue prices to $\$ 3.00$, sent by express at purchaser's expense, for only $\$ 2.25$.

## Palms for the People.

## Grown Without Artificial Heat and Especially for Window Culture.

For ornamental or decorative purposes few plants can equal the grand and stately Palms. They succeed finely as pot plants in living rooms, and every year of their age adds to their size, beauty and usefulness; but as with Orchids, the high prices at which they are hed prevent them from being universally grown, and they can hardly be found outside the conservatories of the wealthy. We are happy to be able to oner the following collection of elegant, desirable and easuy managed soris at prices which will put them within the reach of all. They have been grown in latticed houses and are much haraver and vastlylsuperior, for window cuiture, to those grown under glass at the North. In potting Palms the soul shousd be packed about the roots very firmly and rather small oors used, shifting to larger sizes only when the pots become filled with roots. They do firely in a soil of loam and sand. Leaf mould does not seem to suit them as well as a heavier soil. There is more danger of usitg too large rather than too small pois. The drainage should be pertect, and there should not be a lot of unused soil about the roots to become sour. Du not re-put until the ori puis are mined win roots, and instead of using wide pots, use deed cincs, as the roots prefer to go down rather tuan out. 'they enjoy some sunlight, though some sorts would do better in complete shade than in hot sunshine. Keep the leaves clean by spunging or washing them, and water the soil the same as Geraniums, $k$ ses, etc. Unhealthy yellow leaves are most frequently caused by imperfect drainage, and this trouble may be avoided by careful potting. The scale, which is almost the only msect whina anacas Pa.ms, if it appears, which is rarely, may be easily removed by scrubbing the stock and leaves witn a stick or old, toothbrush dipped in soapsuus.

All Palmis are sent postpzid at prices quo'ed. except those quoted by express.
Areca Lutescens-One of the handsomest and most useiul Palms for house culture, to which it adapts itsklf readily. Once established, it makes a regular grow.h, and if given a fair amount of light it will prove superior to very adverse conditions. Its beautiful leaves are pinnate and gracefully arched, rich shining green, and very firm in texture. The stems and sheathing petioles are perfectly smooth, as if polished, yellow in color, mottled with black, forming an elegant contrast with the deep green leaves. (See cut next page.) Flourishes best in the shade. Strong plants, 20c. each; larger, and finer, 50c. each; fine specimens from 5 -inch pots, by express, $\$ 1.00$ each.

Caryota Urens-The Fish-Tail Palm-So called from the resemblance of the pinnae to the tail of a fish, appearing as if someone had trimmed the leaves with scissors. One of the very few Palms with bi-pinnate leaves, and is a very eloéat species

Chamaerops Excelsa-Hardiest of al! Faims, said to have endured three degrees Fahr., with only a slight covering. A Guick-growing fan-leaf Palm, particularly desirable for window culture, and fine for open ground culture in Florida, where it forms a tall but verv slender trunk. (See cut next page.) Price 10c. each; larger and finer, 2juc. each.

Cocos Alphonsii-This is known in Florida as Ene "Belair Palne," and is hardy all over the State. It is a very choice and beariful Dirnate-ieszec, a trom. Southern Brazil. and it should be planted by everybody in Floria for its fruit as Wio as sts ocaty. the triit is golden-yellow, much like a Peen-to peach in shape, ancur $11 / 4$ inches across, with a curious and pieasant acid taste; they are very refreshing on a hot day. The leaves are bright green, pinnate in torm, and arch out like great plumes. It is also a splendid sort for pot cuiture. Plancs 12 to 15 inches high, 20 c .
Cocos Weddeliana-One of the most el egant and graceful little Palms that has ever been introduced. The plant is dwat and very neat leare thatish greer on the underside, arching out most gracefully. It is finely adapted for decoration of all sorts, and easily enaures the hardships usually falling to house olants. Beautiful little plants, 20c. each; 12 to 15 inches high, 50 c . each. (These prices are very low.)
Kentia Fosteriana-An elegant decorative Palm of easy culture, and should be included in every collection of house plants. It is robust bui compact in its habit and growth, and thoroughly distinct. The leaves are broad in ail their parts and darker in color than those of other Kentias, and the divisions of the leaves always hang down. Fine mailing plants, 200 c . each; fine bushy specimens, by express, 75 c . each.
Latania Borbowica-The Chinese Fian Palm, from which the palm-leaf fans of commerce are made. The most popular Palm in cultivation for decorative work; stands neglect well and also considerable amount of cold. If grown in partial shade while young, the leaves will be of a richer, darker green. Fine plants, 15c. each; larger, 40 c . each; very fine bushy, well-developed plants, by express, 60 c . each.
Livistonia Rotundifolia-A miniature fan-leaf Palm of the most exguisite form and appearance imaginable. The leaves are shaped like those of Latania Borbonica, but are tiny in comparison, and are produced on very short stalks. A plant only a foot high will have as many as a dozen well-developed, perfect leaves, and such a plant is lovely for table decoration. It is very scarce and rare, is especially adapted for house decoration; and will delight everybody who possesses it. (See cut next page.) Fine little plants, 25c. each.
Oreodoza Resia-1he famous and grand Royal Palm, the "Glory of the Mount. ains," and the Palma real of the Spanish West Indies; one or the grandest of pinnate-

LATANLA BORBUNICA.
 grows to a height of over 100 feet, with immense, plumy, feathery leaves and a straight, white trunk. Is very decorative as a not-Palm, and especially when 4 feet or over in height. Nice plants, about 12 inches high, 15 c . each: rood plants, $35 / 2$ to 4 feet high, by express, ioc. each.

ARECA LUTESCENS.
PHOENIX-All the species of this genus here offered are hardy in Florida, and should be extensively planted for lawn and avenue ornamentation. They

SABAL PALMETTO (CABBAGE PALM.) are equally adapted tor pot culture
North, being exceedingly beautiful and standing a great variation of temperature.
 in form and arrangement. Very rare in cultivatint. Jov .anis, lōc. each; strong plants, 2 feet in heigh+ 50. sezin, popina, ine, well-developed, fully characterized plants: = io i jeer nigh, by express, 70 c . each.
Phoenix Faripifera-l ery =apid grower and said to stand the winter cli-
 common Date Palm. Berry shining biack, with sweet mealy puip. Ainc ji bago*
 used for ford, beare venecitc name, Farinifera. Good plants, 15c. each; fine piamts = ect nigh, 50c each postpaid; plants showing full character, 24 tc 2 feet high. by express. 75c. each.
 sharp-pointed pinnae; a beautiful variety and of rapid growth. Makes a large tree in the oper, grcurc. Piants, 15c. each.
Phoenix Paludosa-A rather short-stemmed species with very long, gracefully spreading leaves; the pinnules long and drooping; native of India. Nice plants, 1 J̄c. each; plants 2 feet high, 00 c . each, postpaid; plants, $25 / 2$ to 3 feet high and fully characterized, by express, 75c. each.
Phoexir Pumila-A handscme and remarkably quick-growing species; will grow in any well-fertilized soil. Yiants, Io c. each; piants, \& ieet ingh, juc. eacis, postpaid; plants $2 \frac{1}{2}$ to 3 feet high and fully characterized, by express, 75 c . each.
Phoenix Reclinata-A very beautirul and hardy South African species. Leaves gracefully reclined. Largely grown as a pot plant for the house for which purpose it is especially suitable. 1oc. each; fine plants. $21 / 2$ to $21 / 2$ feet high, showing full character and very handsome and decorative, by express, $\$ 1.15$ each.
Phoenix Rupiccla-One of the most exquisitely graceftul amongst Palms, in elegance taking a similar place to that of the Cocos Weddeliana. With its wide-spreading, arching, pinnate leaves, it is a most valuable acquisition. (See cut on ophosite poge.) Plants, 15c. each; fine plants, $11 / 2$ feet high, showing character, 50 c. each, postpaid; plants 2 feet high, well characterized, by ex-

## press, 75c. each

Phoenix Sylvestris-One of the hardiest and a verv rapid-growing Palm fneming magnificent specimens. Leaves grayich-green, very ornamental. Plants 20c. each, postpaid; plants 2 to 3 feet high, extra heavy and fully characteriz-d. by express, $\$ 1.00$ each.
Sabal Palmetto-The historical Cabbage P'alm or Palmetto of the South; very hardy, resisting severe cold unharmed, as well as a great deal of abuse. A very ornamental Fan Palm. Price 15c. Seaforthia Eleceans-A most graceful Palm, very popular for decorative purposes. Famed the world over for the feathery elegance and grac eful character of its dark-green, perfectly smooth pinnate leaves. 20c. each; much larger and finer, by express, 50 c. each.
"I received the Latanta Borbonica Palm last week in sple"did condition. I wish to thank you for the excellent specimen you sent and to add that I w's most surprised at the large size of same for the money invested. I shall certainly recommend your firm whenever I can. I am so pleased that you will find on sep arate sheet another order for Palins."-SAMUEL J. HUBER, Wis.

## PALMS CHEAP.

On page 13 will be found some very cheap offers of desirable varieties of Palnis of which we have a surplus stock. These we have made up into special collections at special low prices. Everyone is a bargain.

KENTIA FOSTERIANA.

## Bulbs of the Amaryllis Family.

We wish to call special attention to car collection of this class of magnificent flowering bulbs; not that the collection is complete by any means, but never elsewhere have such beautiful and desirable sorts been catalogued at such extremely low prices. Not more than two or three of the Crinums we offer can be obtained anywhere in the Nortn, and they would be catalogued there at much higher prices than ours, and it is acknowledged that our bulbs of this family are the largest and fincst ever sent out by any concern.

CULTURE-Nearly all members of the Amaryllis family require a season of rest from September or October until February or March, during this period giving just water enough to keep the large fleshy roots from drying up and dying. At the close of the resting period, water copiously and keep the plants growing vigorously until the beginning of the next resting season. At the beginning of the growing season remove the top soil down to the roots and replace with fresh soil containing a liberal quancity of well-decayed manure; also water with liquid manure during the growing and flowering perioa and shift the plants to larger pots when they become too much crowded.
Amaryllis Aulica Platypetala-One of the most noble and beautiful of all Produces 2 and 3 flower scapes at one time, bearing immense flowers, rich crimson, checkered with veins of a deeper blood-crimson; green star and maroon blotch in cen ter. Blooms in November and December Bulbs, 6 to 7 inches in circumterence, o0c. each; 8 to 10 inches in circumference, $\$ 1.00$ each, postpaid.
Amaryllis Equestre-Flowers 5 or more inches across, odening out very flat and nodding, instead of being in the form of most Amaryllis; in color bright, sparkling orange-red, with a most beautiful green and $w$ lite star in the center. Bulbs should be ordered previous to April 1st, as they bloom here in March and April in spite of all we can do, even if they are laid on a dry board in the sun. Full grown, biooming size bulbs, only $10 c$. each; very large and fine, 20 c . each; 3 for 50 c .
Amarvllis Formosissima-(Jacobean Lily)-In shape its flowers differ from all other species of Amarvllis, and in color they are a deep, velvcty, intense scarlet. At a distance they look blackish, when the sun shines on them they have the appearance of being sprinkled with gold. The bulbs may be kept dry over winter, and in the spring set in the open ground, where they will quickly begin flowering. They are also fine for pot culture, and for growing in water like Hyacinths, requiring the same treatment. Fine flowering bulbs, 10c. each; very large, 20c. each.
Amaryllis Johnsonii-Although one of the earliest hybrids is surpassed by very few of the new and costly varieties, and still remains a favorite house plant with all who know it, not only on arcount of its handsome foliage and gorgeous Howers, but because of its easy cultivation and its absolute surety to always bloom freely and profusely. With ordinary attention it will flower twice each yearin winter and in summer-the bulbs sending up 2, 3 or 4 flower scapes at one time, each bearing 5 or 6 large, brilliant, velvety crimson flowers, each petal striped through the center with a broad band of pure white. Price of fine blooming bulbs, 25 c . each; monstrous bulbs which will produce 3 and 4 flower-stalks at each blooming, 45 c . each.
AMARYLLIS.
CLIVIA (or Imantophyllum) Miniata-Foliage rich and very deep, dark green, lasting all the year round. Blooms twice a year-once in mid-winter-2 flower-stalks at each blooming and each crowned with a bunch of often as many as 35 lovely lilies, uniquely and gorgeously colored. Each lily is 2 or more inches in diameter, of a rich salmon or light flame color tinged with orange, very fragrant, and lasts perfect a long time. Strong plants, from 6 -inch pots, by express, 75c. each.
FAIRY LILIPS (Zephyranthes)-Z. Atamasco (Atamasco Lily)-Flowers about 3 inches across, of dazzling whiteness, deliciously sweet-scented and borne on scapes about a foot high. 5c. each; 3 for 10c.; 6 for 15c.-Z. Candida (Peruvian Swamp Lily.) Also pure white, but smaller and in every way distinct from the above. Has fleshy, Rush-like leaves and is a profuse bloomer. 3 for 10 c .; 12 for 30 c .-Z. Andersoni Tex-ana-A dainty little species from Southern Texas, having beautiful little golden-yellow flowers much like Crocus. 5c. each; 6 for 2ab.--Z. Rosea-(Pink Fairy Lily.) A very distinct form, with the most beautiful clear rosy pink flowers. A profuse bloomer, one of the most charming species
 in cultivation and very scarce. 5c. each; 6 for 25 c.

CLIVIA MINIATA.

## CRINUMS-A great interest has lately been taken in these magnificent bulbs as people learn what

 grand bloomers they are, and how easily managed. Like most members of the Amaryllis family the Crin-
nums bloom best when they are somewhat pot-bound. May be wintered dormant by letting the soil go nearly dry. The Crinums-and in fact nearly, if not quite all of the various members of the Amaryllis family-are hardy in the open ground throughout the South if care is taken to plant the bulbs deep, so that they will be below the reach of frost. The freezing of the foliage does no harm, and if leaves, or cottonseed hulls, etc., are heaped over the crowns in late fall they will be safe even where the ground freezes 2 or 3 inches deep.
Crinum Americanmm-An evergreen species and of the easiest culture, is best grown as a pot plant and can bc wintered in the cellar if the soil is kept nearly dry. Its large, white, exquisitely fragrant Lily-like flowers are produced in an umbel and borne on a tall scape. A striking plant and far more beautiful than many of the high-priced Amaryllis, and in cultivation blooms several times a year. Give an abundance of water when growing and blooming. Blooms best when somewhat pot-bound, 15 c. each 3 for 40 c .; extra large, 25 c. each

MILK AND WINE LILY.
3 for 65..
Crinum Aucustum (or "Grandolia")-The stateliest and most magnificent Crinum known. Ordinarily it produces an umbel of 30 or more flowers, larger that a half bushel measure, but an old bulb has produced an umbel so large that when carried in a covered buggy it completely hid the person in the seat. The buds are of a deep purplish-red color, and the flowers when open are blood-red outside and delicate satiny blush inside, and deliciously fragrant. The petals are broad and from 6 to 8 inches long, making a flower of an immense size. Bulbs bloom when quite small, and in a large pot or keg it makes a grand display. Blooms at intervals throughout the year. Mailing size, $\$ 1.00$ each; immense bulbs, by express, $\$ 3.00$ each.

CRINUM KIRKII.

Crunum Brandum-Foliage, long, tapering to a sharp point, and bright green. Flowers 4 to 5 inches acrusto, whute sumused win pink, fragrant and proaucea in umoels oto to $\perp U$. A rare sort and, so tar as we know, never elsewhere ottered in this cuuntry. Jirong bulbs, $\$ 1.50$ each.
Crinum Capense Nosea-s owers, many in an umbel, shaped like a Lily, white flushed with pink, a deeper pink stripe running through each petal. May be treated exacily like a Dahlia or Giadolus-set in the ground in the summer and dug up and wintered in the cellar. So hardy are the buids that they may even be kept out or the ground two - ears and surter no mulury. First size bulbs, 2äc. each; second size, very large and strong, 50c. each.
Crinum Capense Aıa-Just hke the kosea in every way except the color of its flowers, which is a pure, sno 'v wale; a very iree bloomer, and everyone is delignted with its pure, waxy and fragrant Howers. It makes a grand companion for Rosea, and everybody should possess both. First size, 2 joc. each; second size, juc. each.
The preceding two Crinums are perfectly hardy in the open ground at least as far north as Long Island, N. Y., and St. Louis, Mo., when phmed deep and mulched arownd in winter.

Crinum Crassipes-Produces a heavy crown of long pointed leaves of a graceful, drooping habit, presentmg a luxuriant appearance. At each blooming produces one or two scapes of 10 to 20 flowers, white with a bright rose stripe down the middle of each petal, and fragrant. A rare and beautiful sort. Heavy flowering bulbs, $\$ 1.00$ each, postpaid; extra heavy bulbs, by express, same price.
Crinum Erubescens-This is a rare tropical speciels, but seldom seen in cultivation. The very dark green leaves grow long and drooping, 3 or more inches broad, and with edges slightly scabrous. The stout peduncles are crowned with umbels of as many as 12 Howers, which are Lily-shaped, claretpurple outside, but soft pink within, and the filaments bright red. It is a very free bloomer. Nice bulbs, 40c. each; very fine large bulbs, 75 c . each.
Crinum Fimbriatulum- (M/k and Wine Lily) - A grand sort: almost as beautiful as the Kirkii, but its bulbs do not grow as large, and its strong growing foliage is more erect and swordshaped. Flowers in umbels, very large and showy, 3 to 4 inches in diameter striped with white and carmine and very fragrant. Nice bulbs, 20c. each; largest size, 30c. each. (See cut on opposite page.) "The Milk and Wine Lily I got from you bloomed in August, and it was a beauty-flower stem over 2 feet tall, and 8 large lilies around it. A large bread plate would not cozer them; and so sweet."-MRS. SAMUEL MADARA, N.J.
Crinum Hybrida Todorea-Long, narrow, pointed leaves, bright green. Flowers 3 to 4 inches across, white with faint suffusion of pink, fragrant and produced in umbels of 8 to 12 . A rare sort now offered in this countrv for the first time. Strong bulbs, $\$ 1.50$ each.
Crinum Kirkii-This magnificent flowering bulb frequently attains the size of a child'shead, and peoduces flowers of the greatest beauty. Usually 2 flower-stalks, each 2 or mure feet tall and of a dark purplish color, are sent up at the same time, each bearing a large umbel consisting of a dozen or more large Lily-like flowers of the greatest beauty and fragrance. The petals are broad and pure white, with a deep reddich-purple stripe down the center of the outside of each, and showing thrnugh faintly on the inside. Each individual flower is about the shape and size of those of the beautiful old Lilium Candidum. It may be grown as a pot plant, or bedded out in the siprisg and in the fall lifted and kept dry over winter, like Gladioli, etc., in a wamin, dry place. Fine bulbs, first size, 3 inches in diameter, 30 c. each; second size, much larger, 50 c . each; third size monstrous bulbs, 75 c . each.
Crimum Moorei (Ornatum)-One of the very choicest of all the Crinums; perfectly easy to grow and manage and has proved to be perfectly hardy in the open ground in Missouri, withstanding the coldest weather there. The true variety is very rare in cultivation and is usually catalogued as C. Ornatum. The flowers are produced in umbels of from 10 to 12 , in color soft delicate blush with a pink bar through the center of each petal, and deliciously sweet-scented. Each flower has a curved tube 3 or 4 inches long, which gives the entire umbel of flowers a most graceful, drooping appearance. No collection of Crinums can be considered complete without this rarely beautiful species. Fine bulbs, true to name, 50 c . each; extra large bulbs, $\$ 1.00$ each.
Crinum Pedunculatum (St.John's Lily) - King among Crinums, mature plants having reached a height of 3 to 6 feet, and a corresponding breadth of magnificent foliage. Much like a giant form of Crinum Americanum, having the same kind of flowers, only larger and in an immense umbel of 20 to 30 or more. Flowers pure white, very fragrant and produced at intervals throughout the year. Full size bulbs are large and stump-like, and can be sent by express only. First size, by mail, 50c. each; larger bulbs, by mail, 75c. each; very large, blooming bulbs, by express only, $\$ 1.50$.
"We thought perhaps you would'like to know how very much pleased we are with the Crinum Pedunculatum or St. John's Lily you sent us last spring. It has now (Scpt. 22nd) two blossom-stalks with 48 lilies on them and the pertume is exquisite. The Crinum Capense Rosea has also sent up a blossom-stalk, but the lilies have not opened yet. We have now 26 different kinds of Amaryllis and Crinums, and those we procured from you have given more satisfaction, generally speaking, than those
Cave had from other firms."'-MRS. L. V. FLINT, Oregon.

CRINUM PEDUNCULATUM OR ST.

JOHN'S LILY.
to each umbel and beautiful sort. It produces usually 2 flower scapes at one time. The flowers are shaped the twelve apostles An exceedingly choice Lily, but have a mush longer tube, so that the outer row drops in a very grare shaped much like those of the old Annunciation white, with a light red stripe down the outside, and on the inside a faint, delicate peach blow tint. Strong, flowering bulbs, by mail 40 c . each; very large bulbs, which will flower grandly, 75 c . each.

GIANT SPIDER LILY, or Svanish Lilv (Hymenocallis (Pancratium) Caribbaeum)-

SPIDER LILY. This magnificent South Florida Spider Lily produces immense umbels of often as many as 25 flowers, and nearly always 2 or more flower sca pes at the same time. The flowers are airy and fragile-appearing, and deliciously sweet-scented. In the center of each flower is a beautiful crown or saucer resembling tissue paper. Partic ularly desiraole for planting out in the open ground for summer blooming. In the fall the bulbs may be pulled up and kept dry over winter, the same as Gladiolus, etc., or may be grown in pots and water withheld when they evince a desire to rest. Too large pots should not be used, as they bloom best when potbound. 15c. each; 3 for 40 c ; 6 for $75 \mathrm{c} . ; 12$ for $\$ 1.25$.
Hardy Spider Lily (Hymenocallis Galvestonensis) - A hardy Spider Lily which may be planted out in gardens all over the North, like a Peony, and have clumps of this elegant and charming flower in the yard with no trouble after once setting it out. Bears an abundance of white flowers equallv as beautiful and fragrant as the tender species. Also equally valuable for pot culture. In the open ground plant the bulbs 5 or 6 inches deep, and in a warm sheltered spot. 15c. each; 2 for $25 \mathrm{c} .: 5$ for 50 c .
Hrmenocallis Littoralis-A very decirable soecies from Tropical America, in cultivation in England as long ago as 1742 , but never catalogued as far as we know in this country. Leaves sub-erect. bright green. 2 to $2^{\mathrm{T} / 2}$ feer long; t.ower-scape $1^{1 / 2}$ to 2 feet long. bearing an umbel of snowy white flowers each with a broadly funnel-shaped cup, and deliciously fra-
grant. Rare and choice. 30 c . each.

## Tropical and Semi-Tropical Fruits.

In this department will be found a fine selection of the most desirable and easily grown representatives of this interesting class of plants. They are far more easily grown than might be supposed, and form a most desirable addition to any collection of plants. All plants of this class offered at the North are obtained from this State. The varieties we offer are carelully selected as the easiest to grow and give satisfaction. They are every one especially adapted for cultivation in pots or tubs, as they dwarf themselves readily under these conditions and fruit nicely. All except the Pineapple may be wintered in the cellar if desired to do so; but the majority are so beautiful in form, leaf, flower, or fruit that they are well worthy a prominent position both summer and
winter. They are no more difficult to grow than the average run of pot plants.

CATTLEY GUAVA.

ANONAS-A class comprising some of the most delicious fruits known, and splendidly adapted to pot culture or the orchard house. In pot culture see that the drainage is good, and keep rather dry during winter.

Anona Glalora.-The Pond-Apple or wild Custard-Apple of South Florida. Fruit as large as a pippin apple, handsome and fragrant and palatable to most people. Worthy of cultivation even as an ornamental alone. 15c. each; extra large and strong, 30 c . each.

Anona Squamosa.-The Sugar-Apple or Sweet Sop. A most delicate fruit, much grown in the West Indies and at Key West. The fruit resembles an inverted cone, or a small pineapple minus the crown, and is of a yellowish-green color when ripe; the pulp is very sweet, and of the consistency of soft butter, and contains several shining black seeds. Grows in the form of a bush, and in Florida sprouts readily from the roots when frozen down. A small bush less than 5 feet high has ripened upwards of 30 fruit's in one season. At the North makes a nice pot or tub plant. Deciduous in winter.

## loc. each.

BANANAS-See page 4 and the 4 th page of cover.
CARISSA Axduima-The Amatungula or Maritzgula of Natal, South Arrica, which the English pronounce unsurpassed for jam making. A choice, rather hardy evergreen shrub with very glossy, thick, Camellia-like leaves, and large, white, fragrant flowers which are borne profusely. Fruit dark red, 1 to $1 \frac{1}{2}$ inches long, having a papery skin, and resembling in flavor red raspberries. A hne pur shrud. Fine strong plants, 35c. each.

CASIMIROA Edulis-The White Sapota of Mexice and Central America. Fruit about the size of a Mandarin orange and of a delicious, peach-like flavor. An interesting pot fruit and a good subiect for growing under the sheds now coming into use in Florida. Fine strong plants, 40 c .

CATTLEY GUAVAS-These two Guavas are something entirely distinct, no musky odor or flavor, the plants
hardy enough to stand any temperature above 20 degrees, and for fruitfulness surpassing anything we ever saw. A plant 18 months old has burne 500 fruits. We have had plants less than 18 inches high carrying 165 fruits and a plant which could be covered by a box 4 feet square and $21 / 2$ feet deep held 1,005 fruits, bloom and buds at one time. They, are ever-bearers after they become established, bearing buds, flowers or fruits in some stage every day in the year. Evergreen, with beautiful, shining, thick, Camellia-like foliage, they would make grand ornamental pot-plants if they never bloomed or fruited. Can be wintered in the cellars at the North or kept growing the year round.
Red Cattley or Strawberry Guava (Psidium Cattleyanum)Fruit somewhat smaller than an English walnut, of a fine claret color, and a flavor resembling that of a strawberry; makes a beautiful colored jellv.
Fellow Cattley Guava (Psidium Lucidum)-Foliage hardly distinguishable from the Red, but the fruit yellowish-green, about the size of a guinea egg, and of a slightly acidulated flavor, also fine for light colored jelly. Considered even hardier than the Red species.
Prices-Fine mailing nlants of either sort, 15 c . each: 3 for 40 c . One of each snrt of mailing size fnr nnlv 25c. Larger size of either sort, 25 c . each; 3 for 65 c . ; or one of each for 45 c .
COMMON GTTATAS-Bntanically Pcidinm Guninvn, of which there are a great number of varieties, inclinding both round and pearshaped fruits, and pink, yellow and white fleshed. The fam us jelly producer, and has become to Snuth Florida what the peach is to Georgia or the apnle to the North. Ta entirelve dictinnt in every way from the Cattley Guava, both the bushes and the fruit attaining a greater size. The fruit of most varieties has a peculiar musky odor and flavor but nearly everv one soon becomes passinnately fond of it. Makes a fine pot or tub shrub hint will not endure froct.
Hawaiian Gorava-A variety sent us hv a friend in Hawaii as being one nf the chnice sorts grown in the Santwioh Tslands.
Sour White Grava-A selected variety largely grown in Florida. Fruit medium size, white, quite acid; extra fine for preserving and especiallv for jellv.
Sweet White Guava-Fruit about the same size as the above, White, of a somewhat sweetish flavor. Fine for eating raw out of hand or served as sauce on the table; also used for all preserving (canning) purposes.
Yellow-Fleshed Gmava-Another selected Florida favorite sort. Fruit large, deep green skin, flesh yellow. Has less seeds than the above snrts, flavor extra fine. slightly acid; a delicious sort for use raw on the table or for all other purposes.
Prices-Nice mailing size plants of the above four Guavas, 15c. ench, 3 for 30 c . ; 90c. per dozen.

FIG GROWING IN A POT.
"The two Cattley Guava Plants received from you last year are Hourishing and are now covered with fruit."-MRS. GEORGE G. CLAPP, Mississippi.
"The Fig' I got of you last January is about one foot high, and is now (Oct. 30th), loaded with fruit; and we are almost on top of the Rockies. It is a great curiosity here."-MRS. SUSAN EZEKIEL, Colo.

FIG－The fig is a fruit so delicious，and so easily raised，and the whole plant so ornamental and interesting，that it should be grown everywhere．Those who nave never eaten any but the dried figs of commerce cannot form any conception of the lusciousness of a tresh fig，or preserved tigs and cream．They make splendid tub plants for the North，and are as easy to grow as a Geranium．They usually bear plame fruit the first season and thereafter are literally loaded．Figs may be grown in the open ground as far north as Rochester，N．Y．，where they are perfectly hardy when treated as follows：On the approach of cold weather tie the branches together closely，then bend downwards as close to the ground as possible and fas－ ten there by tying to stakes．Then cover over and around with boards，over these a thick layer of straw，and over the straw a covering of four or five inches of soil． Very large bushes or trees may be treated in this manner，as the stems are very flexible．It is best to plant figs in as warm a position as possible，such as the south side of a building or tight board fence．They may also be very successfully grown as pot or tub plants and be wintered in the cellar or pit．
Celestial or Suear Fig－Small，pale violet，very productive，and so exceed－ ingly sweet that in favorable weather they will preserve themselves on the tree．Fine plants，20c．each；larger，by express，i0c．each．

HOG P】UM（Spondias lutea）－A celebrated fruit of the West Indies．Flowers yellowish－white，in panicled racemes．Fruit plum－ike， 2 inches long，with a deli－ cious acid，aromatic flavor．Highly esteemed in the American tropics．20．c．each．

KEI APPEE，or Dingaan Apricot－Botanically Aberia Caffra，a South African spiny shrub，much used for hedges in Cape Colony．Yields round lemon－ colored fruits an inch or more in diameter，having an agreeable，somewhat acid flavor and making a most palatable preserve，and in an unripe state is used for pickling．Strong plants，3äc．each．

## LEMONS AND ORANGES－Fine varieties offered on pages 3 and 4.

MANGO－Botanically Magnifera Indica，one of the most productive and rapid－ growing tropical fruit trees known．Its fruit is larger than an egg，kidney－shaped and so deliciously flavored that a small boy has been known to eat twenty－five at a sitting．It is an evergreen，with beautiful Laurel－like leaves from six to ten inches long and two or more inches broad，the new growth of a rich wine color，changing to a darl shining green．A most ornamental pot or tub plant for the North．Should be planted by everybody in South Florida， as it sprouts readily from the root if cut down by frost．Though it makes an immense tree in the tropics，it bears in two years from the seed and five－year old trees in this State have borne thousands of mangoes． $2 \overline{\mathrm{c}}$ ．each．
MELON Papaw（Carica Papaya）－For an illustration of this remarkable tropical fruit plant see＂Choice Specialties in Plants and Bulbs，＂page 7，where it is also described and of－ fered as an ornamental．Aside from its highly ornamental char－ acter it possesses many remarkable qualities，one of which is its peculiar property of making tough beef tender．This is commonly practiced in the tropics，where the plant is universally grown．The meat is sliced and wrapped up in the bruised leaves for half an hour or so，or rubbed with the rind of the fruit．The ripe fruit also pnesesses wonderful diqestive qualities and has been called vegetable pepsin．It is said that a slice eaten for desseri will prevent indigestion，while it is recorded that stubborn cases of dyspepsia have been cured by a continued indulgence in the fruit．The ripe fruit is sliced and eaten as one would a melon，and has a very peculiar flavor，exceedingly rich and spicy．When in fruit the plant is a most striking ob－ ject．The trunk，without branches，forms a column set around thickly with melons，in tiers one above another，the lower one； ripening first．Plants are male and female，at least one male plant must be grown to obtain fruit．Plants 20 c ．each； 3 for $50^{\circ} \dot{\circ}$ ．

MYRTUS Tomentosa－（Dozny Myrtle．）－A very hand－ some small evergreen shrub，from Northern India，bearing fruits about the size of a gooseberry，red in color and of an agreeable sweetish taste；fine for jam，etc．It should be grown in every Florida garden for its fruit，and at the North as an elegant pot shrub．＇（See cut and further description on page 26．）Price of fine plants，15c．each；strong plants from 3－inch pots， 30 c ．each．

PINEAPPLE．

DOUBLE RED POMEGRANATE．
OTAHEITE Gooseberry－Botanicany Cicca disticha．A rre and beatiful tree of strikingly tropical appearance，bearing large quantities of waxy white berries resembling cherries in shape and size．growing in clusters like currants and with a sharp acid taste，ripening in mid－summer and useful for pies，preserves， etc．The graceful pinnate leaves are a foot or more in length， with a faint tinge of wine color on the new growth，and the long racemes of waxy berries hang directly from the large limbs and branches．Worthy of extensive cultivation simply as an ornamen－ tal，as a pot or tub plant North and in the open ground in Flor－ ida．Sprouts up readily when frozen down．1⿹勹口．each；larger，30c．

PINEAPPLES－It was this delicious fruit a Huguenot priest described more than 300 years ago as being of such excel－ lence that the gods might luxuriate upon it，and that it should be gathered only by the hand of Venus．It is one of the most beautiful decorative plants imaginable，and is well worth grow－ ing on that account alone；but it will fruit in a greenhouse or a window．Should be re－potted frequently during the first year．
Red Spanish－The Pineapple of commerce．Ruddy yellow when ripe；sub－acid，sparkling．15c．each； 3 for 40 c ．
Eovotian Queen－Very showy，of fine flavor，and most prolific，bearing more surely than any other sort．Flavor some－ thing like that of a wild strawberry．20c．each； 3 for 50 c ．

Smooth Cayenne－A favorite sort with the fancy Pine－ apple growers．Is without spines on its leaves and is thus easily handled．Fruit large and exceedingly fine flavored，vet a good shipper．Extra good for pot culture．15c．each； 3 for 40 c ．

Pernambuco－A very rare pineapple，especially adapted for pot culture on account of its fruiting while young and very small．Fruit so tender and iuicy it must be eaten from the rind with a spoon．A tumbler full of juice can be squeezed from half an apple as readily as from a lemon．It is almost as tender and iuicy as a watermelon，and its aroma and flavor are superb．Fo－ liage tinted bronze and is highly effective and ornamental．30c．
POMEGRANATRS－This beautiful and delicious fruit， sometimes called the Carthaginian Apple，was known and cultivated in the very earliest annals of the world＇s history．Should not be confound－ ed with the ornamental sorts，offered on page 27 ，which produce worth－ less fruit or none at all．Pomegranates are deciduous and may be wintered in pit or cellar．
Double Red Pomerranate－Possesses the dnoble merit of produc－ Flng fine flavored fruit and as fine flowers as the strictly ornamental sorts． Flnwers perfectly double and measure $31 / 2$ inches across．Blooms and fruits while very small and makes a fine pot or tub plant． 20 c ．each．
Purnle－SeededPomeoranate－A remarkable seeding of the Sweet Pomegranate and originated in this State．Its distinctive features are the verv large size of its fruits，resembling laroe red apnles．力 fine sub－acid flavor，and the deep purple of the grains of the pulp resembling clusters of rubies．The iuice is as dark as port wine，sprightly and vinous．Ifas been pronounced＂the perfection of Pomegranates．＂15c．each．
SAPODTTILA Or Neseherry－The Achras Sapota，of spreading tree－form，with thick，glossy leaves．The fruit can be compared to a rus－ set apple，with the taste of a rich，sweet，juicy pear．with granulated pulp； almost equal to the mango，and the taste does not have to he acquired． Choice and rare；fine for pot culture． 20 c ．each；larger plants， 35 c ．
STAR APPLE－Botanically Chrysophyllum Cailito．A handsome ever－ green shrub or small tree bearing nurn＇e or green fruits $21 / n+0,3$ inches in diameter，of peculiar but agreeable flavor．Leaves 4 or 5 inches long， dark green above，silver brown beneath，and very handsome．Fine plants， 20 c ．each；larger，very strong 40 c ．each．

## Some Choice Climbing Plants.

## ALLAMANDA Hendersonii-A superb plant

 which may be trained either as a climber or a shrub. Covers itself completely with immense tubular flowers 5 inches in diameter, rich, velvety yellow, with fine white spots at the throat, which is delicately marked with reddish brown; the lobes thick and waxy; tinged with brown on the outer surface. Magnificent.
## 20c. each; larger, 30c. each

Allamanda Williamsii-Entirely distinct from all others and may also be grown in bush form, with trusses of bloom at every point. Flowers thick and waxy, of a very rich yet delicate tint of golden yellow, and deliciously scented. Begins blooming while very small. 10ैc. each; larger, 30c. each.
Allamanda Neriifolia-See page 24. ASPARAGUS Plumosus NanusLeaves or plumes very dark green, as finely ALLAMANDA FLOWER.like a Fern-frond, yet it is a sturdy, dust and gas proof plant which will flourish in any apartment. If kept in a starved state it will assume a dwarf form 6 to 12 inches high, but give it rich soil and root room and it will climb as freely as Smilax. 15c. each; larger and very fine, 30c. each.
Asparagus Tenuissimus-Imagine the common vegetable Asparagus transformed into a delicate climber, but with far finer and more filmy foliage. transforming everything it touches with the most airy and delicate greenery imaginable. Trained over windows or white curtains the effect is bewitching. 10̄c. each; larger, 30c. each; extra large and fine, 50c. each.
AGDESMIA Clematidea, or Mock Clematis-A very rare climber from Mexico and Brazil, almost unknown in cultivation, to which we have given the name of Mock Clematis. As its name indicates, its flowers are Clematis-like, being almast exactly like those of Clematis paniculata, but smaller and more delicate in every way, pure white and of

lace-like mistiness and delicacy. The root is just like a Sweet Potato and produces a delicately beautiful vine with waxy foliage. It grows most luxuriantly and for freedom of blooming cannot be surpaissed, completely covering itself with its loose sprays or panicles of flowers which are s.mply exquisite in cut-flower work. Blooms for months in succession either in the ground or in pots. Tuber is hardy in the lower South. 15c. each.

BIGNONIA Alba-Flowers tubeshaped, pure white, with yellow throat. ot hardy North. Rare. 20c. each.
Bignonia Capreolata-Flowers tubular, orange-red and very handsome. Beautiful evergreen vine, hardy as far north as Philadelphia. A fine trellis plant. 10c. each.

Bignonia Chamberlaynii-Filowerts tunnel-shape, golden yellow,produced from April to Octoer in racemes of from 6 to 8. Hardy in the lower South. 10c. each.
Bigmonia Speciosa-A truly magnificent sort, with shining green foliage and long drooping branches, its very large Maurandia-like flowers are of a soft violet shade, beautifully veined with purple and black; blooms through the spring and mmer. Hardy at Charleston, S. C. 15c. each.
Bignonia Venusta-Rich orange flowers in great clusters. A winter bloomer for conservatories, or for Florida in the open where it produces a marvelous display of its dazzling flowers. Rare and very distinct. 15c. each.
CAROLINA JESSAMINE-The farfamed Yellow Jessamine (Gelsemium Semper virens) of the South. Covers itself completely with beautiful golden yellow, exquisitely sweetscented, funnel-shaped flowers. A large vine in full blnom is a sight never to be forgotten, and one beyond the power of pen to describe. It may be grown in a pot or box, trained on a trellis and wintered in the living room or cellar, which would, perhaps, be the best plan at points far North where the winters are usually severe. With slight protection it has proved perfectly hardy in Illinois, and also in Philadelphia. As a trellis plant for the window nothing can be more beautiful and desirable, as it blooms young and is ornamental at all times. A well grown specimen would create a sensation anywhere. Price of fine pot-grown plants, CAROLINA JESSAMINE. which are sure to grow off rapidly, 15c. each.

SOLANUM WENDLANDII.

CHEROKEE KOSE (Rosa Sinica) -Of the greatest value for hedge-making throughout tne South. Will grow in the poorest soil, the canes often attaining the length of 10 or 12 feet in one season, and are beset with numerous large spines or prickles. The leaves are in threes, smooth and glossy, shining as though varnished, and the large, single, snowy white flowers measure about 3 inches across with a heart of fluffy golden stamens. Lovely for training over verandas, wincows, etc., and ornamental at all times. Reliably hardy as far north as Washington at lealst. Strong open ground plants, 20c. each.
HONEYSUCKLE Golden-Leaved - Leaves small and so netted and veined with yellow as to give this hue the predominance. 15c. each; 3 for 40 c
Halliana Honeysuckle-Evergreen and blooms almost constantly. Flowers white, hanging to light buif. lōc. each.
Red Coral Honeysuckle-Blooms almost constantly, flowers beautiful coral-red outside and yellow within, long and tube-shaped, borne in large clusters, and drooping like a Fuschia flower. 15c. each.
IPOMOEA Pandurata-(The Hardy Tubcrous-rooted Moonflower). Perfectly hardy everywhere. Hlowers bell-shaped, 3 to 6 inches across, pure satiny white, with a pinkish-purple throat. Very fine. Sprout in a pot, then plant out deep. Flowering tubers, 10c. each; 6 for 50c. Extra large, 203c. each; 3 tor 60c.; 6 for $\$ 1.10$.
MAMAYMN JESSAMMNE (Khyncospermum Jasminoides)-A most beautiful climbing plant with glossy evergreen foliage and producing in great urofusion the most delicate, sweetscented Jasmine-like flowers of the purest white. A wellgrown plant will be completely smothered with flowers as our cut indicates. It blooms when very small, and we have seen cuttings only 2 or 3 inches long in thumb-pots bearing clusters of perfect flowers. The flowers are of a peculiar rotate form, something like a wheel, and several are borne together in a loose, graceful cyme. In the Southern States, Irom Florida to Louisiana, it is perfectly hardy. It is absolutely. without fault as an ornamental flowering climber, having no insect enemies, and requiring no coddling whatever, being abundantly able to cope with conditions which would kill outright many vines. As a pot plant it may be grown in the form of a low, spreading, oval shrub by occasionally pinching off the ends of the shoots. Its most profuse season of flowering is during April, May and June. 15 c . each.

PASSIFLORA Incarnata-(May Pop or May $A p$ ple)-This beautiful Passion Flower bears a profusion of lovely purple and white blossoms followed by orange-colored fruits as large as an egg or an apple and filled with a delicious yellow pulp. When cat the fruit will perfume the atmosphere the same as a musk melon. One of the most desirable of all the Passifioras for general cultivation on account of its hardiness and early blooming qualities, beginning to bloom when only a few inches tall. The roots are perfectly hardy in the latitude of New Yurk, if protected, or they may be wintered in the cellar: it is strictly a summer growing and blooming vine. Fine for training around piazzas and windows. 15c. each; 3 for 40 c .

Passiflora Pfordti - One of the most beautiful and desirable for pot culture, as it begins blooming while very small, otten when the vine is less than 6 inches long. The flowers are of exceptionally large size, often 5 or 6 inches acrosls, the sepals nearly white, the petals broad and of a lovely violet-pink color. The numerous filaments are of a beautiful dark blue, with rings of white near the base, contrasting beautifully with the dark brown color below. 15c. each.

THUNBERGIA FKAGRANS.

SOLANU'M AZUREUM.

MALAYAN JESSAMINE.
PERESKIA Aculeata (Lemon Vine, or Barbadoes Goose-berry)-A climbing Cactus with true leaves, much like Lemon leaves, but more fleshy, with stout spines at the base of each leaf. Bears in the greatest profusion the most exquisite single white flowers, resembling white Roses, and of almost overpowering fragrance. These are followed by edible fruits about the size of a gooseberry. No one would ever mistrust from its looks that it belongs to the great Cactus family. 10̆c. each; 3 for 40c.; larger, 2 jेc. each.
SOLANUM Azureum-Leaves deeply and beautifully cut, flowers fragrant and lovely, star-shaped, of the richest and most delicate blue, with bright golden stamens, produced in large clusterts like great bunches of Wistaria flowers, and followed by bright red berries as large as marbles, that remain on the plant for weeks. Almost always in bloom. 15c. each.
Solanum Jasminoides Grandiflora-May be grown as a beautiful climbing vine, or in bush form if kept pinched back. Completely covers itself with very large clusters of star-shaped flowers, pure white with a violet tinge on the back. Begins blooming while very small and is constantly in flower. 15 c . each.
Solanum Wendlandii-As a summer climber, this plant is simply glorious. It is doubtful if any other climber will cover so much space in so short a time, while from June until its growth is checked by frost the profusion of its flowers is simply remarkable. The flowers are produed in immense cymes at the end of pendulous branches. These cymes, or heads of bloom, are from 8 inches to a foot in diameter, containing from 25 to 40 oden flowers, but as buds keep opening in succession each head lasts perfect for at least a month, and often much longer. Each individual flower is from $11 / 2$ to 2 inches in diameter, and lasts several days. When first opening the color is dark blue, but this changes to a light lilac in the center. with a darker edge, and gives flowers of various shades of blue and lilac at the same time. The hotter the situation given it, the more glorious the display it will make. It should be treated as a summer grower only, being deciduous and going dormant in winter. It may be cut down in fall and only the root lifted and wintered. In the lower South the roots are hardy if mulched with trash of some kind. 15c. each.
TEUNBERGIA Eracrans-The annual climbing Thunbergias are well known to most flower lovers, but this magnificent perennial species is known to but few. It is of a slender, graceful climbing habit-much like the annual sort-with deep green waxy leaves which are cordate or hastate at the base, giving them a very distinct appearance. But its crowning feature is its flowers. Each one is as large as a silver dollar, of the purest waxy whiteness, with a delicate lemon-yellow spot in the center, or throat. The plants begin to flower while quite small, and continue almost incessantly. It is equally valuable for open ground or pot culture, and after growing all summer it may be cut back and potted for the window. 15c.
SECOMA Radicans (Trimpet Cpecper)-Too well known to require description. Prized for its perfect hardiness everywhere, and its great panicles of lovely, bright orange, tubular flowers, of a thick, waxy texture. May be grown as a beautiful weeping shrub by planting at the foot of a stout stake, and as soon as it has run a few inches above the top, pinching it off, causing it to form a dense, bushy head. The side shoots from the ground up must also be kept off and attention paid to the head to see that it is well formed. 15c. each: 3 for 40 c .; 6 for 75 c . ; 12 for $\$ 1.25$.

Tecoma Capensis-For description of this see page 28.

INDIVIDUAL CANNA FLOWERS.

The Canna is too well known to require extended description. Valuable alike for its lush tropical foliage and its torch-like spikes of large and braliant flowers, no garden or lawn is complete without a serection of Cannas. They are also especially suitable for growing in connection with aquatic and bog plants, as they will thrive in very damp soil. We offer a selection of the finest sorts.
Allemania-This is the grandest of the magnificent Italian Orchid-Flowered Cannas and its flowers surpass in size even those of Canna Italia; the petals are a bright yellow, with large blotches of vermillion-orange, these blotches heavily mottled with scarlet, making a gorgeous Orchid-like flower of the greatest magnificence. Foliage maiestic he ing qlancars and Eanana-ike. Uriginally isoricd at \$o each. Uur price, only luc. Black Beauty-A grand varie ty with beautiful foliage of a deep bronzy wine-red, al-
most black, as highly colored as 2 Dracaena. No other plant known equals it in coior most black, as highly colored
Grows 5 to 6 feet. 20 c. each.
Charles Henderson-Equally well adapted for the garden in summer and the window in winter. Of a dwarf, compact habir. rartly exceeding $3 T /$ fest neight in the garden and less in pots. Fons of the varieties excel it in the dazzling crimson color; the incividual flowers are very large and of admirable form, and a yellow marking in the center adds to their attractiveness. 10c. each.

Ecamdale-Especially valuable as a bedding varietv having dark bronzw foliage similar to the oid Indica varlitiss, but with iarge, bright cherry-red fowers of good snape and substance. Height, four feet; one of the dest Dzonze Denios, 10c. each.
Florence Vaughan-In color a bright, rich golden yellow, spoted witr zright red. The flowers are of the largest size, of great substance and perfect form, borne in large heads and the greatest profusion. Plants rarely exceed 3 feet in height. 10c. each.
Madame Crozy-This is one of the grandest of all the Dwarf French Cannas. The color of its tlowers is a driliant vermilion-scarlet, bordered with a deep golden yellow, the petals very wide and broadiy rounded making a nuwe as ia-ge as a fair sized Gladiolus bloom. It rarely attains a height of over four feet; the fowers commence aftearinc when it is only a foot high, and from then on are produced in such rapid succession that the plant is always in bloom. 10c. each.
President Cleveland-A genuine Gibraltar among Cannas. Height only $3^{31 / 2}$ feet, but the strongest heaviest grower in the family; crowned with numerous immense trusses of large, rich orange-scarisy Blowers. A mass of bloom from very early in the summer until cut down by frost. 10c. earh.
President McKinley-One of the earliest flowering Cannas and valuable either for bedding or pot culture. Flowers a fine clear crimson, with scar et shading, and borne in large even trusses, which are carried well above the foliage. Plant dwarf in habit. growing but $21 / 2$ to 3 feet even in rich snil. Foliage rich green with chocolate margin. 10 c . each.
Queen Charlotte--Habit of growing similar to Mme. Crozy, the petale are hrnad and reflexed, the center off each being a brilliant scarlet surrolunded bv a hrad and distinct band of golden yellow, which gives a very unique and novel effect, as if gold-
laced. Amateurs can find nothing that will supply a more continu ous or glowing dash of color to summer garderis than this. 10c. each
 border of bright gold. A marvelously profuse bloomer and stan ds the hottest sun without burning. Height 3 feet. Better even than Mad. Crozy, which is highest praise, 10c. each.

## Aquatic and Bog Plants.

Few are aware of the amount of enjoyment to be derived from the cultivation of this class of plants, which are as easily grown as any. Tubs, artificial pools be used for this purpose, and after once planting about all the care the plants require is to see that the supply of water is constant. The soil may be either good, rich loam, and decayed cow or stable manure in equal parts, or rich mud or muck. Tubs should be set in the warmest, sumniest part of the yard; and they may be wintered in the cellar.

## HARDY WATER LILIES.

The following Lotus and Nymphaeas are perfectly hardy everywhere in soil beneath the water, where the frost cannot reach them, no matter how thick the ice forms on the surface of the water. Once established in a pond, lake or any still body of water, they will spread from year to year and furnish quantities of their exquisite flowers. They can also be grown with perfect success in ordinary tubs in the yard, and bloom all summer. In planting the roots do not tie them to a stone and sink them, but push the roots carefully into the mud, after which they will take care of themselves.
EGYPTIAN IOTUS, (Nelumbium Sneciosum)-The wonderful "Sacred Lotus," so famed in prose and poetry. One of the most tropical appearing plants in cultivation, but egually as hardy as our common Water Lily. In rich soil it will ntnnuce leavec 30 inches across on fontstalks 5 to 6 feet in length. and fower stalks 5 to 7 feet tall. The flowers nonen like an immence Tulip. the base of the petals being creamv white. most beautifully and delicately shaded off toward the end into bright pink. Thew nee dolich-fyyly fongrntt. and in the last stages of their develnpment measure from 10 to 13 inches from tip to tip of petals. It grows readilv and rapidlv and blooms finely in a tub; but the 50 c. each. No seed for the results. We offer roots at the very low price of 50 c . each. No seed for sale.
"Last year I had a tub each of Nelumbium Speciosum and Luteum, and lots of blossoms. They were beauties." - MRS. B. PINKNEY, Kan.

EGYPTIAN LOTUS.

NYMPHAEA Odorata-Our native Water or Pond Lily, the praises of which can never be too highly sung. its lovery whate and deliciously iragrant flowers appear at an advantage beside the must costly exutics. In very rich soil it will produce flowers 6 inches and leaves 13 inches across. $2 U \mathrm{C}$. eacn; 3 tor buc.
Nymphaea Udorata Gigantea-1 his is a gigantic form of the white Water Lily, en diameter, and howers o inches across. The leaves have their edge, very curiuusly ruftled, and fragrant, pure whice with a golaen yelluw ceathr, ant ul a ucided cup-shape, giving it a very listinct appearance. It begins to flower vary early in the spring and cuntinues to bloom profusely until trost. 15c. each; 3 for tuc.; 6 tor iUc. ; 12 for $\$ 1.20$.
Nymphaea Odorata Minor-A dwart variety of Odorata, possessing the same qualities of hardiness and iragrance, but producing flowers only $11 / 2$ to 2 inches across; white, tinted wi.h pink on the outside. 'T he leaves are correspondingly smail. A perfectlittle gem.

TUB GROWN HARDY NYMPHAEA.

## WATER HYACINTH.

Floats on the water by means of its curiously inflated leaf stalks and throws up spikes of the most exquisice fiuwers as beauriful as many of the choicest Orchids. Each flower is as large or larger than a silver dollar; in color a beautiful soft lilac-rose, sparkling as if covered with diamond dust. The upper petal, which is the largest, has a large metallic-blue blotch in the center, and in the center of that a small deed golden-yellow spot. Can be grown in the open air in summer, and in the windnw in winter, in anv thing which will hold water. 15 c . each; 3 for 3 3c.: 6 for 60 c.

## WATER POPPY.

## (Limnocharis Humboldtii.)

A charming and easily cultivated plant. with small oval, floating leaves and the most exquisite flowers of a bright lemon inches out freely all summer. Eaci'v and produced freely all summer. Easi'v grown in a dod WATER HYACINTH away from frost. 10 c . each.
"The Water Poppy in a tub n
"My Water Poppy has aloomed feet in diameter had 144 blooms."-WILL B. POTTS, Ind. J. E. CLARKSON, Tenn.

WATER POPPY.

## UMBRELLA PLANT.

(Cyperus Alternifolius.)
A splendid decrrative plant. being almost as ornamental as a Palm or Fern, and above all is as easily grown as the commonest weed. As it will thrive in shade as well as sun, it is an excellent plant for the dining-room table. It is also fine for the centers of baskets, vases, Wardian cases, or as a water plant in very moist spots, or even in shallow water. It throws up slender, round stems from 2 to 3 feet high, surmounted at the top by a whorl of flat ribbon-like leaves, diverging horizontally, giving the plant a very curious appearance. It should have an abundance of water when grown as a pot plant. 15c. each.

## PARROT'S FEATHER.

## (Myriophyllum Proserpinacoides.)

This aquatic hanging plant is a novelty indeed. Its long trailing stems are clothed with whorls of the most exquisite foliage as finely cut as the leaves of the Cypress Vine, and much more delicate. Planted in a water-tight hanging basket so water can be kept standing on the surface of the soil, it will trail down over the sides in a most charming manner. It can be grown in the tubs with oth. er aquatics. and trained over the sides with beautiful effect. In a tank or lake it prefers shallow water and will run about over the surface, the ends of the creeping stems standing erect. forming beautiful tufts or tassels. 10c. each.
"I have Parrot's Feriher in a haodsome glass bozel, over which it droops berutifully. while the center is full of short thumes."-MRS. 1 . C. WELLCOME, Maime.

Special Offer-We send a root of each of the abovc catalogue prices to 55 c ., post paid, to any address for onl? 45 c.
"I am delighted to find that it is an easy matter to have the de. beautiful Water Lilies with no other conveniences than a tub. Last summer mine wis a luxu. which the snowy blossoms nestled and perrmmed the mornigg
air for reveks."-MRS. A. G. SMITH, Pa.

WATER HYACINTH.

## Half Hardy or Pot Shrubs.

This magnificent class of plants used to be very popular, but was crowded out for a time by the craze for "bedding plants." Can be grown in pots, boxes or tubs, grouped about the lawn or piazza, where they will bloom profusely all summer, and be wintered in the cellar, if desired. Each passing year will only add to their size and value. All they require is good soil and liberal waterings.

ABEEIA Rupestris-A beautiful Chinese evergreen shrub covering itself from early summer to autumn with pale pink tubular flowers. Reliably hardy at least as far North as Philadelphia. Makes a fine shrub both for pots and the open ground. 15c. each; extra large and fine, 30c. each.
ALLAMANDA Neriifolia-An elegant shrubby species producing clusters of tubular yellow flowers, the throat streaked with dark orange, followed by very curious seed pods. Fine for pots or bedding out. 20c. each; larger, very fine, 30c. each. (Fior climbing Allamandas see page 20.)
ARDISIA Crenulata-A handsome evergreen shrub, producing a profusion of white flowers and clusters of vermilion colored berries which remain on the plant a long time. Being evergreen and covered the year round with either berries or flowers, or both, the plant is always beautiful. 15c. each.
White-Berried Ardisia-Like the above in every way except the berries are pure white. 15c. each.
CAMPHOR TREE (Cinnamomum Camphora)-The Camphor Tree or Camphor Laurel, from which the gum camphor of commerce is obtained. A beautiful everrreen, hardy in the lower Gulf States. Leaves smooth, and a rich, shining green, the newer growth tinged with a beautiful wine color, making a striking contrast. One of the most symmetrical trees imaginable, forming a perfect cone from the ground to the summit. It should be extensively planted in Florida as an ornamental tree for yards or streets, and at the North as a pot or tub plant, on account of its ornamental character and its very aromatic leaves account of its ornamental character 15 c . each; extra large and fine, 30 c . each.
CESTRUM Laurifolia-A greatly improved form of the famous Night-blooming Jessamine, producing in the greatest profusion clusters of greenish-tinted white flowers which are overpoweringly sweet at night. Makes a lovely pot plant, and is of the easiest culture. Blooms almost the year round, and small plants, 12 to 18 inches high, load themselves plants, 12 to 18 inches high, a spray being produced in the axil of every leaf. Forms a lovely, large dense shrub in Florida gardens. 10c. each; larger, 30c. each.
Cessrusn Diurnum-Day-blooming JessaCesurum Diurium-Day-ving evergreen mine. A handsome, quick-growing producing quantities of sweet-scented shrub, producing quantities of sweet-scented white flowers, valuable for cut fower work, and pot plant of the easiest culture, and for the open ground in Florida. 15c. each; larger, 25 c .
Cestrum Parqui - The famous Night blooming Jessamine, producing beautiful white flowers in clusters, and the greatest profusion, overpoweringly sweet at night. It is said to be overpoweringly sweet at night. It is said to be the most valuable of all perfume plants. Thrives to perfection in the open ground in Florida, quickly forming a large, dense shrub, and sprouting up readily if frozen down. It is a lovely pot plant, and is of easiest culture, thriving to perfection in good loam and sand. 15c. each; extra large, 25 c . each.

CLERODENDRON Fragxans Flore Pleno-The accompanying little cut conveys some slight idea of the beauty of this much neglected plant. It is of low, shrubby growth, with urge, trupical luoking leaves, duil gree above, and dusty appearinc beneath. From the axils of the leaves appear compact heads of the most exquisite waxy white flowers, exactly like miniature Camellia blooms, and of the most delicious banana-like odor. The flowers are produced in such a compact head as to resemble a bouquet. Given a rich soil it blooms profusely; can be wintered in the cellar or kept up for winter blossoms. If cut do in by frost, it sprouts up readily and vigorously from the root. As a pot plant, it should be pinched in and made to grow bushy. 15c. each; 3 for 40 c .

COFFEE (Coffea Arabica)-A beautiful evergreen shrub, witis waxy, shining aark green foliage and sweet-scented flowers, disposed in axillary clusters, which are succeeded by bright red berries, which contain the coffee kernels A fine companion for the Tea Plant. Give ample pot room and p.enty of water. 15 c .

CRAPE MYRTLES-Our cut shows the appcarance of the individual flower, but we leave to the imagination the appearance of the bush completely covered with large panicles consisting of such flowers. The petals of the flowers are like crape, and the panicles of the bloom are larger than those of the Lilac. It can be set in the ground in the spring, where it will bloom readily, and in the fall be dug up, put in a box and wintered in the cellar, or it can be kept in a box or tub the year round. As far north as Philadelphia the roots are hardy in the open ground, shooting up freely in spring and blooming.
Light Pink-A favorite: Scarlet-Very fine; PurpleChoice. Prices, 15 c. each; 3 for 40 c .
Special Offer-One each of the above 3 sorts for 35 c .
CROTONS-Among the finest decorative plants known combining the gayest and brightest colors with the most wonderfully diverse forms, their varied hues far surpassing autumnal effects. The leaves are all more or less margined. sometimes entirely variegated with shades of yellow, oranoe and crimson. 15c. each. 3 (all different) for 40 c .
DATURA Arborea-This grows in a fine miniature tree-form and completely loads itself with pure white drooping bell-shaped fowers a foot long, 6 or 8 inches wide, of the most overpowering sweetness, and the same flowers open ing for several days in succession. 15 c . each.
DAUBENTONIA Punicea - An ex ceedingly beautiful and very rare pot shrub almost, if not quite, unknown at the North. It forms a lovely little miniature tree, with long, slender branches curving upward and outward. giving the top an umbrella-like shape. Its leaves are like those of the False Acacia, and its pea-shaved flowers, produced in racemes like those of the Locust, are vermilion-red. When the plant blooms it hangs full of these brilliant pendant racemes, presenting a gorgeous and beautiful sight unlike that of any other plant with which we are familiar. 15c. each.

ARDISIA CRENULATA

ALIAMANDA NERIIFOLIA.

CLERODENDRON FRAGRANS FLORE PLENO.

CRAPE MYRTLE FLOWER.
ERANTHEMUM Pulchellum-A
fine pot plant for winter blooming, producing lovely, deep blue flowers very freely from Christmas until spring. It grows in nice bushy shape, with many side branches, terminated with a spike of numerous blossoms; leaves dark green and wrinkled. It is of the easiest culture, requiring but little care, and this, combined with its rare color, will make it very popular. 10c. each.
GOLDEN DEWDROP (Duranta Plumicri.)-A handsome evergreen pot shrub bearing racemes of lovely delicate blue flowers in great profusion. They resemble the flowers of the For-get-me-not, but are larger, are produced for at least 3 months, and are rapidly followed by clusters of beautiful golden berries, which hang on for 6 months, so that the plant is ornamental three-fourths of the year. 15c. each; larger, 30c. each.
JESSAMINES-The Jessamines, or Jasminums, form a class which is noted for the combined beauty and fragrance of all its varieties. They are great favorites and as easy to grow as Geraniums.
Cape Jessamine (Gardenia Florida, Fl. Pl.)-One of the most beautiful and desirable evergreen shrubs in existence, producing large, double, white, exquisitely fragrant flowers from May until September. Hardy thruaghout the lower South. Our cut shows the form of the exquisite Camellia-like flowers, but the real flowers must be seen in order to appreciate their waxy texture and delicious perfume. The plant grows in very beautiful form, and with its dark, shining leaves is highly ornamental at all times. 15 c . each; 3 for 40 c .; larger, 30c. each.
Gracillimum-A new Jasminum and remarkable for its freedom of bloom. Of graceful habit, long, slender branches springing out near the ground and curving over on all sides. A flower shoot is produced at every joint, which terminates in a cluster of pure white flowers. Is in bloom from October to February. 15c. each; larger, 30c. each.

CAPE JESSAMINE.

GOLDEN DEIVDROP.

CROTON

JUSTICIA Bicolor--Blooms nearly all the year. Flowers star-shaped, white tipped crimson-maroon and rcsemble some species of Orchids. 10c. each; larger, 2oc.
Justicia Coccinea-An upright-growiag pur pant ot rree growth, with large glossy green leaves and terminal spikes of bright coral-red Howers which look as if made of wax, and crown the pant neariy the whole year. Does finely in the open ground all the year round in this State, or beaded out in the summer at the North. 10c. each.

LION'S TAIL (Leonotis Leonurus).-An old plant but lost to cultivation until reintroduced a few years ago. A very showy plant, as easy to grow as a Geranium and constantly in bloom during the entire winter. The bright, orange-colored Howers look as if made of plush, and are produced in curious whorls. Fine for pots North and a grand plant for South Florida gardens. 15c. each.
MAGNOLIA Grandiflora-The wondrous Magnolia of the South, the most magnificent of all our Southern broad-leaved evergreens. Leaves very large, much like those of the Rubber Tree, dark, shining gre en above and a beautiful rusty brown beneath, forming a striking contrast. Flowers 6 to 8 inches across, creamy white, waxy and Dowerfully fragrant. Forms a majestic tree 60 to 80 feet high. Not considered hardy north of Washington, though a well-protect ed specimen in Philadelphia blooms annually. But as it begins blooming when quite small, it can be treated as a tub plant and wintered in the cellar. Price of fine pot-grown plants, which are sure to live and grow off finely. 20 c . each.
MELIA Floribunda-A small evergreen shrub growing three or four feet high, with straight stem and symmetrical crown of dark green leaves. Its upright panicles of purple and white flowers are exquisite, so fragrant that they will nerfume a large room, and are almost constantly produced, the plant blooming when only a foot tall. It makes a delightful pot plant and is one of the very best of the new plants. 20 c . each; larger, 30 c .
Melia Umbraculiformis-The Umbrella China Tree which is so popular as a shade tree throughout the lower South. The top assumes a perfect umbrella shape and when covered with its dark green, compound, twice-pinnate leaves is the most symmetri-

LION'S TAIL. ers itself with panicles of exquisitely fragrant lavender or lilac flowers. As a tub shrub it would prove a great attraction for a Northern yard. Strong, open ground plants, 2 joc. each.
MELASTOMA-A genus of beautiful evergreen shrubs of great beauty for pot and tub culture and found in this country only in the rarest collections. They bear large, showy flowers, purple, violet, rose, rarely white, shaped like those of the Pleroma (offered on page 2i). which belongs to the same family or order.
Candidum-The young stems and leaf stems are wine-red and covered with soft white hairs, giving a peculiar appearance. The red color also extends about half way along the five strong and prominent veins underneath the leaves. The leaves are deep green and covered above and below with silky white hairs, giving them a beautiful appearance and velvety texture. Flowers large and purple. Native of China. 15c. each.
Sanguineum-Crimson bristles clothe the stems of this species, adding much to the plant's appearance. The leaves green above and shining, but red at the nerves beneath, and are very distinct and ornamental. The branches terminate in clusters of very large, delicately-soft pink or rose colored flowers. Also native of China. 20c. each.
MYRTUS Tomeritosa (The Downy Myrtle)-A very
handsome and distinct
species,
bearing beautiful fivepetaled flowers resembling in size the D g Rose. The

MAGNOLIA GRANDIFLORA.

MELASTOMA SANTGUINEUM.
flowers appear in such worderful profusion that the leaves of the plant are almost completely hidden, and the branches weighted to the ground. The flowers are followed by fruits about the size of a gooseberry, red in color, and of an agreeable sweetish taste; fine for jam, etc. It should be grown in every Florida garden for its fruit, and at the North as an elegant pot shrub, Good plants, 15c.each; strong plants from 3 -inch pots, 30 c .
OLEANDER-The Oleanders are too well known to require extended description. No plant is easier to manage; the flow ers possess a fragrance almost rivaling the Rose, and a well-grown specimen is an object of great beauty. (See varieties on next page.)

MELIA UMBRACULIFORMIS.

MYRTUS TOMENTOSA.

Rosea Splendens-Double pink, a scit, exquisite shade, and very tragrant, producing its flowers in great abundance. 15 c . each; 3 for 40 c ; larger, 30 c . each.
Double Red-Deep rich color, inner petals more or less marked with narrow white stripe; flower not quite so large as the double pink. 15c. each
Double White-Beautiful beyond description, forming a lovely contrast with the pink and red varieties of Oleanders. 15c. each.
Single White-This is the most profuse flowering shrub we know of, and certainly one of the most beau tiful. It loads itself with such quantities of exquisite flowers that the foliage is almost completely hidden. ioc. each; 3 for 40c.; fine large plants, 30 c . each.
Carneum-A very free-flowering and exceedingly beautiful variety. Flowers single, pure white with deep pink lines in the throat, producing the most exquiste effect imaginable. 15c. each; larger, 30 c . each.
Special Offer-We will send one each of these five fine Oleanders (amounting to $7 \overline{\mathrm{j}}$.) for only $6 \overline{\mathrm{c}} \mathrm{c}$.
POMEGRANATE - The dwarf or ornamental flowering Pomegrayates are exceedingly beautiful pot
shrubs. The outside, or calyx, of the flower looks as if cut out of very thick sealing wax, while the inside, or petals, look like crape or crimped tissue paper.
Alba Plena - Creamy white flowers, very doub.e. 15c. each.
James Vier-A very dwarf variety, with flowers large and most brilliant orange-scar let. Very desirable. 15c. each.
Variegata - Flowers very large and very double, yellow, flaked with scarlet. A mag. nificent variety. 15 c . ea ch.
PLEROMA Splendens - Rare and exceedingly beautiful, and flowers almost the year around. Leaves feeland look as if cut out of lovely green flowers larger than a silver dollar and of a rich, deep, royal purple - a shade almost unknown among flowers. The plant grows in fine symmetrical shape, like a miniature tree, and is never ton small to bloom, while good-sized specimens present a display clarming to behold. Does finely in the open ground in Florida, sprouting readily from the roots when frozen down. 20c. each.
POIPCIANA - (Bird-of-Pcr-dise Flower.) - The Poincianas are among the chief glories of tropical and semi-tropical gardens and make exceedingly fine pot-shrubs on account of their elegant foliage and brilliant flowers.

Poinciana Tolclerrima - 1 beautiful shrub with finely pinnate Mi -mosa-like leaves. The new growths completely covered all the time with deli. cate orange and red flowers, the stamens and pistils very long and curving upward, giving the flower a most curious appearance. A perfect blaze of glory when in bloom. Is easily grown, and begins blooming when only a foot tall. 15c. each.

Pulcherrima var. Flava-This variety seems to be practically unknown outside of the West Indies and South Florida. Flowers bright, clear yellow. A fine companion for the orange and red. 15c. each.

PLEROMA SPLENDENS.

RUELIIA (Goldfussia) AnisophyllaForms a very symmetrical bush about 18 inches high covered in late fall and winter with hundreds of lavender-blue, thimble-shaped flowers. 15 c . each; larger, 25 c . each.
Ruellia Eormosa-A very desirable and free-flowering plant, blooming continuously and of the easiest culture. Flowers very rich scarlet. Salvia-like, but larger and borne in great profusion. Thrives in any light rich soil, and is fine for either pot-culture or bedding out in summer. $15 \mathrm{c} . \mathrm{e}=\mathrm{ch}$.

Ruellia Lonofilorm-A splendid plant for pot-culture, coming into full flower in 2 months from the cutting and throughout the dull months of winter being covered with bright red blossoms. Also fine for bedding out, as it is practically an ever-bloomer. A real gem, and would be univeranlly grown if its merits were only known. 1ăc. each.
Ruellia Makoyana - A new Brazilian plant of easiest culture for the house or bedding out in summer. Leaves velvety, dark olive-green, with prominent silvery-white midrib and veins, underside purplish wine color. Flowers larse, brilliant carmine. produced even on plants in 2 inch pots, and almost the year around. Speci-

ULEANDER.
PIUMBAGO-The Plumbagos will bloom constantly for months in succession, and then again after a good cutting back and a brief rest.
Capensis-A most delicate and quite indescribable shade of light blue rarely found in any other flower. Exquisite. 15c. each.
Capensis Alba-Flowers creamWhite. Otherwise exactly like Capensis. Very choice and beautiful. 15c. each.
Snecial Offer-The two for $2 \overline{\mathrm{c}}$.
ROSA MAicropliylla (Burr Rose, Chinquapm Rose, Locust Rose.)-A very rare and distinctive Chinese Rose which was a great favori.e in the old Southern plantation gardens before the war but has since become very rare. It gets its common names from the curicus fact that all the spines are gathered together on the calyx or outside covering of the flower buds, siving them the appearance of a burr, especially the burr of the Chinquapin, and that its small fragrant, pinnated leaves are so unlike any other plant except a locust tree in miniature. Flowers large, perfectly double t) the center, of bright shade of pink, and produced in succession thrnughout the season. Hardy south of Washington. Farther north should be treated as a pot or tub plant the year round. 15 c . each.

SOLANUM RANTONETTI

TEA PLANT.
TEA PLANT (Camellia Thea.)This is the true Chinese Tea Plant which makes a beautiful little evergreen pot shrub, covered with lovely single white flowers, each with a profusion of golden-tipped stamens. It it truly beautiful as well as novel, and of the easiest cultivation. It is perfectly hardy throughout the Gulf States where it makes fine hedges, and good tea may be prepared from its leaves. 15 c . each; larger, 30 c . each.

## TABERNAEMONTANA

 Coronaria F1. P1. (Adam's Apple or East Indian Rose Bay.)-It forms a neat, sl rubby pant-somewhat like a Cape Jessamine-and for months at a time is completely covered with the most beautiful double, wax-white flowers with elegant crimped petals, fra-

TABERNAEMONTANA CORONARIA.
FL. PL
mens have been exhibited that were 2 to 3 feet across, carrying over 300 open flowers. 15c. each.
Ruellia Tuberosa-This is in reality a rare and very desirable novelty sent to us from Europe, and so far as we know has never been offered in this country by others. It is of a very bushy dwarf growth and covers itself with beautiful Bignonia-like flowers which stand above the foliage and are of the same lovely shade of blue as the Cornflower. Bedded out in summer it will flower from July on till Christmas if potted before frost. 20c. each.
SOIANUM Rantonetti-The True Blue Solanum. This is a shrubby sort which bears flowers of the very deepest and clearest blue, which is brought out more vividly by a yellow center. It forms a neat little bush about 2 feet high, which is covered with bloom during the' entire summer and almost until Christmas. See cut on preceding page. 15c. each.
TECOMA Capensis-A native of the Cape of Good Hope, South Africa, a close relative of the Trumpet Creep. er, but smaller and more delicate in stems, leaves and flowers. The latter are tubular, orange and scarlet, and borne in dense racemes. The leaves are pinnate and of a beautiful dark shining green, contrasting finely with the glowing heads of flowers. The plant may be traned as a climber or as a shrub by cutting it back occasionally when it will assume the form shown in the accompanying cut. Treated

in this way it makes an elegant pot shrub, beginning to flower while in $21 / 2$-inch pots and the plant very small, and its period of blooming is very prolonged,-in fact, it is almost a perpetual bloomer. It is very fine for training in front of piazzas in Florida. 20c. each; larger, very fine, 30 c . each.
THUNBERGIA Erecta-A
beautiful shrubby species from West Africa, and one of the most handsome of all the Thunbergias. When cultivated in pots it assumes a dwarf compact habit, and is covered almost throughout the year with lange, tubular flowers, which are a very rich bright purple in color, with an or ange-yellow ihroat. It is especially fine for winter forc ng, as its exquisite flowers can be obtained then in great abundance. Catalogued at the North at 75 c. each. Our price of nice plants only 15c. each; larger, 30c. each.
YUCCA Aloifolia-The Span ish Dagger-One of the most imposing and tropical-appearing plants with which we are acquainted, and it will stand any amount of neglect, except too severe freezing; but it is hardy as far north as South Carolina. It is always ornamental from its smallest size until it becomes an
imposing specimen. Leaves very dark green, stiff and pointed, forming a fine head. Begins blooming when quite small, producing an immense head of creamy, bell-shaped flowers. As a decorative plant it cannot be surpassed, being fullv as desirable as the finest Palms and even more striking in appearance. 105c. each: 3 for 40 c .; larger and very fine, 40 c . each.
"I received the plants Saturday and wish to thank you for promptness and balance favor credit, which $I$ will withhold until my spring order. All the plants were in excellent condition, and are superb stock at the prices. The Dracaena Cooperi was superior to anything of its kind that $I$ can get here for 75 cents. I am one of the heaviest individual purchasers of seeds, plants and bulbs in the country, devoting $\$ 25.00$ per annum for this and botanical purposes, and have dealt with nearly every grower in the country and therefore have perfect knowledge of the matter. I also wish to commend the accurate manner which you employ in applying the botanical names to your goods. Throughout your catalogue they are applied with few exceptions, and in every case according to standard authorities."-C. Z. NELSON, Ill.

SPANISH DAGGER.

## Miscellaneous Bullbs and Plants.

## MARANTA ARUNDINACEA.

This is the Aru or true Arrow Root plant from which the arrow root of commerce is obtained. It is not only a very interesting plant, but a very beautiful foliage plant, and produces pretty small white flowers. It soon fills a pot, making a fine specimen, quite distinct and tropical in appearance, and is very effective among other pot plants. It may also be bedded out, if desired, and will flourish in any position, no matter how poor the soil. Fine tubers, 10 c .

## HARDY GRASSES.

EULALIA Japonica Zebrina-Leaves very dark deep green, striped or marked across instead of lengthwise, with bands of cream white, producing a very peculiar and beautiful effect. 10 c .
Eulalia Japonica Gracillima-Totally distinct in appearance from the above. Leaves very long and very narrow, of a beautiful green color with a silvery white mid-rib. 10c.
ERIANTHUS Ravernae - A very stately tall-growing, Reed-like Grass, from South Europe. Sends up stout stems 6 to 8 feet high, bearing fine graceful plumes in abundance. Rarely seen but ought to be in every garden. 10 c .

ARUNDO Donax Variegata-A magnificent BambooReed growing 8 to 12 feet high and clothed with exquisitely variegated leaves quickly producing a splendid oriental effect. Hardy as far north as New Jersey if the tuber-like roots are mulched over winter, or may be lifted and wintered in box of soil in cellar. 150. each; strong, large roots, by express, 30c. each.
Special Offer-One of each of the above 4 grasses for only 40c., postpaid.

## ST. LUCIE GRASS.

This is the grass used to make the beautiful lawns around the great Flagler hotels at Palm Beach and Miami. The best of all lawn grasses for Florida. Looks like Bermuda Grass but grows more rapidly, is greener in winter, and is easily eradicated, as it makes no underground shoots. It will make a fine lawn on the sandiest of land. Price, 40c. per 100, postpaid; $\$ 1.50$ per 1,000 , by express.

## YUCCA FILANIENTOSA. <br> (Thread and Needle Plant.)

Too well known to need description. Extremely tropical ap. pearing, perfectly hardy everywhere. A splendid plant for the cemetery and rock work. 15.c. each; 3 for 40 c .

BANANAS:-
HART'S CHOICE.

## BANANAS.

Very few people know that these plants can be grown in the North as successfully as either Cannas or Corn. Such, however, is the case, and there exists no good reason why everyone should not possess his own Banana "tree," and annually enjoy its masnificent growth. They make grand decorative plants when grown in large pots, kegs or tubs of rich soil, and they are particularly valuable for open ground culture in the centers of beds of foliage plants, moist situations, etc. The cut gives some idea of the splendid form these plants assume. An Illinois gentleman tells in the following words how easily they are grown in the open ground: "Last May I set out a very small plant of Hart's Choice variety, not over 15 inches high, in an entirely unprotected situation. Bv fall it was 7 feet high and had leaves 6 feet long and 18 inctes broad; the stalk measured over 26 inches in circumference at the ground." But this record has been greatly outdone at the North, where small plants of the Orinoco Banana, set out in May, have attained a height of 18 feet by the first of Octnber. with ennrmous leaves 10 feet long and 2 feet wide. Of course these $p^{1}$ aints were set in very rich soil and given an abundance of water and liauir met in very In planting, dig a good sized hole. 18 inches or more manure In planting, dig a good sized hole, 18 inches or more thrive wonderfully in muck soil), set the plants in this, and keep well watered during the summer, and thev will make an astonishing growth. Just before frost, cut all the leaves off (hut do not cut the stalk), dig them un and place the roots in a box of earth, but keep them guite dry (to orevent growth), and they will winter as easily as a Canna or Dahlia. If you want to see the grandest

plant that ever grew, plant a Banana; and if you wish to "astonish the natives," remember that y u cannot make the soil tonish the natives, for it, nor give it too much water. If you failhfully attend to these two points, you will say in the fall that it has paid. If possible, set the plants in some sheltered position-the hotter the better-where the wind cannot strike them to whip and tear the magnificent great leaves.
 extra fine sort; dwarf, but very strong and robust, attaining a height of onlv 6 or 8 feet. The magnificent leaves look as though sprinkled with blond. Yield of fruit enormous, sometimes as many as 200 or 300 in a bunch. Tubers, 20 c . each; 3 for 50 c .; larger, by express, 25 c . each; 3 for 65 c .

Orinonen Bangna (Musa paradisiaca var. sapientum)-A grand sort for hedding nut; grows very large, oroducing a magnificent effect. Verv hardy. and should be grown evervwhere as an ornamental plant. T1,hers, 15 c . each; 3 for 40 c . ; larger, by express, 25 c . each; 3 for 60c.
Hart's Choice (Musa Orientum)-Of medium height, stalk and midrib tinged with red. Reara earlv. and is very hardv for a Ranana. Fruit unsurdassed in flavnr. Tuhers, 25c. each; 3 for 70 c .; larger, by express, 30c. each; 3 for 80 c .

## The three sorts make a magniticent clump in a yard.

Smecial Offer-Fnt nnlv 50c. we will send postpaid one tuber of each of the above three varieties of Bananas, amounting at catalngue prices to fic.
Other Tropical Eruits-See pages 3, 4, 18 and 19.
